

Albemarle (ALB): Lithium Low-Cost Curve Anchor

Albemarle trades at **\$134.51 (\$15.87B Market Cap)**, down -39.1% from \$221.00 following the lithium price collapse. ALB generated **\$1.33B in Free Cash Flow** and trades at **11.9× Forward P/E**.

As the world's lowest-cost brine lithium producer in Chile (Salar de Atacama) and hard-rock in Australia (Greenbushes), Albemarle's low cash-cost tier protects solvency while higher-cost competitors curtail production.

VALUATION AT \$134.51
