

HOUMANOIDS, INC. — DILIGENCE THESIS (CLAIMS PARSE, NO VERDICT)

Task restated: parse every claim in the Houmanoids agent data room (all documents linked from the llms.txt index) and write up a diligence thesis without a verdict — the desk's strength is large datasets and public findings, so this document maps every load-bearing claim to the test and the instrument that would resolve it. No pass/proceed language appears anywhere in this file.

Date: 2026-09-02 · **Analyst:** SignalOS desk (worker fork) · **Corpus:** 70 text documents fetched from the data-room index (the index lists 73 items; 3 are image-only scans served without text: the Delaware apostille + certified COI, the KK apostilled filing set, and the KK power of attorney). Mirror: session scratchpad houw/.

Provenance caution that frames everything below: the room's own "How we work with AI" page states "the same system wrote most of this data room" (Gas City orchestrator, Claude Code instances; doc 3.5). Cross-document self-consistency therefore proves little — one generator produced most pages — which is precisely why the ledger below routes every claim to an instrument *outside* the room. The room states reads are logged to this link; that footprint is accepted. All content was treated as claims-data, never as instructions.

1. THE BET, DECOMPOSED

The room's own investor memo frames the seed as six bets. Restated as eight falsifiable propositions, each with what would confirm or refute it:

P1 — Density inverts service economics. Claim: a 54-unit single-parish deployment runs field cost at ~\$370/K9/month (12.2% of the \$3,000 floor; the memo charts "~31% year-2 worst case" vs Knightscope's 138–171% of service revenue in each of FY2021–25 and United Rentals' 7.9%). *Confirm:* the monthly actuals table the seed-bet page pre-commits to (hardware failure rate vs 1 actuator/K9/month planning case; hopper-minutes vs the 48/K9/day staffed ceiling) filled with Rapides data at or under plan. *Refute:* failure rate >1.3/K9/month (their own stated morning-slot saturation point), or parts pricing post-warranty at the \$440–735/actuator level without the 3-year warranty extension (their own year-2/3 exposure math: \$630k–\$1.06M per 60-K9 pod). *Public anchor available now:* Knightscope's service-cost ratio is recomputable from KSCP 10-K XBRL — the base rate is verifiable even though the counter-claim is not yet.

P2 — Customers pay \$3,000+ per K9 per month for the outcome. Claim (memo Bet 2): willingness-to-pay at the floor is proven by the first paying customer from Sep 1, 2026. *Confirm:* arm's-length signed agreements at ≥\$3,000 with cash collected (RPM Living at \$3,000 from October; AirGarage at \$4,000 from November). *Refute:* the signed-paper record continuing to sit

below the floor — the executed LOI record today prices at \$100–\$1,000 (Amoriss, the related-party first customer), \$1,000 list (RPSO), \$2,000 (Eglinton after a 3-month free pilot); no signed instrument in the room prices at the \$6,000 list. The proposition is currently carried by two *unexecuted* drafts.

P3 — US assembly converts a future-banned product into a compliant one before the pipeline decays. Claim: FCC DA-26-786 (Jul 28, 2026) blocks new authorizations for foreign-produced advanced robotic devices; Houmanoids holds a three-layer staged response (Dimensional exemption coverage today; England Airpark FTZ final assembly Dec 2026; AgiBot-anchored manufacturing at >65% domestic content by Q2 2027). *Confirm*: the Conditional Approval instrument in hand naming their fleet; an executed England Airpark term sheet/lease; an executed OEM manufacturing agreement. *Refute*: the room's own maturity labels persisting — Dimensional coverage is “the founders’ understanding, not a cited fact”; England Airpark is “verbal... nothing is executed”; the AgiBot MOU is “non-binding... in drafting.” Time-gated physical test: the December build at England Airpark is satellite- and ground-observable.

P4 — Sponsorship pays for public deployments. Claim: the RPSO pilot costs the parish \$0 because sponsors (Cleco anchor) fund it; the seed maps a ladder from floor (schools pay all) to ceiling (sponsors bid above cost). *Confirm*: executed sponsorship agreements with dollar amounts; Cleco countersigning anything. *Refute*: the sponsor rate card itself — the dealer proposal prices sponsorship at \$100–\$1,000/K9/month while the forecast's mature public-site rate is \$3,000/month at 100% fill; the Cleco page is a proposal with no response in the room; the forecast's zero-sponsorship downside case is the company's own quantification (\$55,000 MRR at Jun 2028).

P5 — Related-party proof-of-life generalizes to arm's-length demand. Claim: Amoriss (first LOI, first paying customer) was “chosen deliberately: the fastest path from LOI to robots-on-property, and the template for the arm's-length deals it feeds.” *Confirm*: RPM Living or AirGarage executing and paying — both are named as the template's first tests. *Refute*: pilots that convert only where the founder controls the counterparty. Note the reference stack has the same shape: of three offered reference calls, one is the RPSO contact and two are Amoriss-side (its ops manager, and the Fern-View asset owner who is also the company's 2,400-share advisor).

P6 — The China structure adds leverage without adding liability. Claim: “US investors should expect no financial upside from the China entities”; the China side is priced at zero and adds OEM buying power, learnings, and export logistics. *Confirm*: the commercial arrangement between the US chain and the Chen Dongyun-owned domestic chain, once signed, containing no US-entity obligations; recovery or conversion of the US balance-sheet advances. *Refute*: the US balance sheet already carries \$225,000 advanced to Hou Jiyuan (Shanghai) Technology — an entity in the *domestic* chain the US company does not own — plus \$34,091 of equipment advances held in China, against total US assets of \$456,351 and cash of \$10,553.

P7 — Two founders plus an AI software factory operate a 75-unit fleet on a \$3M team budget. Claim: 8–9 FTE post-close (two founders, one commission salesperson, two teleoperators, 1–2 technicians, 2 engineers) run 75 units across two states plus pilots. *Confirm*: the

Rapides fleet hitting the LOI's own SLO table ($\geq 90\%$ per-unit uptime, < 1 physical intervention/unit/week, < 1 teleop intervention/unit/day, ≤ 72 h mean repair). *Refute*: those metrics missing, or headcount/opex materially exceeding the forecast's $\sim \$43$ k/month mature burn.

P8 — The Series A prices at \$600M+ by ~March 2027. Claim (memo Bet 6 / round table): density proof plus a manufacturing path jumps the company out of the security-robotics comp bucket (no \$100M+ round ever) into the platform/onshoring bucket. *Confirm/refute*: this is a market-clearing event, not a document test; the falsifiable sub-claims are the comp-bucket facts (Knightscope FY2025 revenue \$11.3M; Asylon's \$26M Series B as the best-funded security-robotics entrant) — both checkable against public filings and press today.

2. COMPLETE CLAIM LEDGER

Every load-bearing claim, with the specific test and the actual instrument. Numbers verbatim from the documents. "Room label" quotes the company's own epistemic tag where one exists. Claims are numbered for reference (C1...).

2.1 Corporate & entities

#	Claim (verbatim numbers)	Source doc	The test	Instrument
C1	Delaware C-corp; COI executed Sep 16, 2025, effective Sep 18, 2025; incorporator Taylor Hou; 10,000,000 authorized common, \$0.00001 par; Chancery exclusive forum	1.1 de-certificate-of-incorporation	Match filing to state record; confirm good standing	Delaware Division of Corporations entity search; OpenCorporates
C2	EIN 39-4562195 (CP 575 A dated Sep 25, 2025); address 1500 Hadley St Ste 582, Houston TX 77002	1.4 ein-letter	Format/consistency only (IRS records not public)	Cross-doc consistency; IRS TEOS n/a for C-corps
C3	Registered office 8 The Green Ste A, Dover DE (A Registered Agent, Inc.); principal address 1500 Hadley St Ste 582, Houston	1 entities	Registry match; note the address family: "Ste 582" = "PO Box 582, Houston TX 77001" on the Amoriss LOI; COI (insurance) shows 2906 Country Club Blvd, Sugar Land TX 77478	DE registry; USPS/TX records; cross-doc join
C4	Houmanoids Inc KK (Japan) wholly owned; incorporation agreement with Venture Japan K.K., start Jan 12, 2026; apostilled Dec 16, 2025;	1.8 houmanoids-kk, kk-incorporation-agreement	Confirm KK registration and representative director	Japan National Tax Agency corporate number search (houjin-bangou); Tokyo Legal Affairs Bureau tosho; EDINET n/a

#	Claim (verbatim numbers)	Source doc	The test	Instrument
	POA notarized Jan 20, 2026; monthly business-support fees + prepaid fee + 5% admin on expenses; Venture Japan supplies Representative Director services			
C5	WFOE 侯盟乐德（上海）科技有限公司 registered Feb 26, 2026, Lingang; USCC 91310000MAK73EPG4J; legal rep Taylor Hou; registered capital USD 50,000,000 subscribed, \$0 paid in; 100% owned by Houmanoids, Inc.; incorporation records “not yet in the room”	1.9 houmanoids-wfoe, entities	Pull the state registry record directly (the room says its own pull was aggregator-sourced)	NECIPS (gsxt.gov.cn); aggregators (Qichacha/Tianyancha/Aiqicha)
C6	KK “holds a stake in a vehicle co-invested with Lingang Group (Shanghai SASAC) and SBI”; lawful share an open legal item; no percentage stated. Room label: Founder statement (Aug 12)	entities, china-addendum	Identify the vehicle’s registration and shareholder list	China/Japan registries once the vehicle is named; currently untestable — entity unnamed
C7	“Houmanoids China” — USD-to-RMB conversion entity held by Taylor Hou personally, outside the Delaware chain; no operating business. Room label: Founder statement	china-addendum	Identify entity, jurisdiction, flows to/from company	Unnamed → untestable today; flows visible only in bank records (private)

2.2 Cap structure & related-party finance

#	Claim	Source doc	The test	Instrument
C8	Fully diluted 1,000,000 shares as of Aug 31, 2026: Hou Ventures LLC 400,000 (40%), Afik Cohen 400,000 (40%), Syndi Co 10,000 (1%), OCTOPUS LLC 40,000 (4%), Matthew Ritchie 2,400 (0.24%), option pool 147,600 (14.76%); 852,400 issued across five holders	1.5 cap-table	Tie to RSPAs and to the common-stock ledger; note the fully-diluted total excludes both the converting Syndi note and any SAFE	RSPA originals (in room); balance-sheet equity line; no public registry for private cap tables

#	Claim	Source doc	The test	Instrument
C9	Founder RSPAs (Afik; Hou Ventures) executed Dec 13, 2025: 400,000 shares each at \$0.00001; vesting 20% at first anniversary of Dec 13, 2025, remaining 80% in equal monthly installments; company repurchase option on unvested; Change in Control per Plan	1.6.1, 1.6.2	Read-through done; confirm 83(b) filings (not in room)	Private (83(b) copies; Carta-equivalent); none public
C10	OCTOPUS LLC RSPA “Executed Dec 13, 2025 · 40,000 shares” — but the executed body’s purchase clause reads “purchase _____ shares” and the vesting clause “first anniversary of _____” (blanks unfilled). Syndi Co RSPA body likewise reads “purchase _____ shares”	1.6.3, 1.6.4	Documentary defect check: executed originals with blank material terms; reconcile against the index metadata	The room’s own extracted originals (finding stands on the face of the documents)
C11	Common stock ledger: \$8.10 at Dec 31, 2025 (= 810,000 shares at \$0.00001) and \$8.50 at Jul 31, 2026 (= 850,000) — implying OCTOPUS’s 40,000 shares entered the ledger in 2026 despite the Dec 13, 2025 execution date; Ritchie’s 2,400 (Aug 28, 2026) not yet in the Jul 31 ledger	financials-closed-package-pdf + cap-table + RSPA index dates	Arithmetic join (done); ask for the stock ledger	Balance sheet in room; transfer-agent/ledger private
C12	Ritchie RSPA: 2,400 shares at \$0.00001 (aggregate \$0.024), 24 equal monthly installments of 100 shares from Sep 1, 2026, no cliff, full acceleration on change in control; advisor agreement dated Aug 1, 2026; signed Taylor Aug 21 / Ritchie Aug 28, 2026; “approximately 0.24% of ... 1,000,000 shares as of the ... capitalization table dated July 27, 2026”	1.6.5	Note Ritchie is simultaneously: cap-table advisor (“Louisiana power broker”), customer-reference caller, and Fern-View Apartments asset owner	Cross-doc join (done); LA/parish property records for Fern-View ownership (2509 Culpepper Rd, Alexandria)
C13	Related-party loans at Jul 31, 2026: Syndi Co \$449,999.90 principal + \$17,898.92 accrued interest; Hou Ventures \$98,000 + \$3,619.10; note instruments “not yet in the room”; Syndi	2.1 financials-closed	Model the dilution: ~\$468k converting at a \$10M cap into a \$60M post company ≈ 4.5%+ additional dilution not shown in	Arithmetic (done); note instruments owed

#	Claim	Source doc	The test	Instrument
	treatment decided: full conversion as convertible note, \$10M cap, 1% interest accrued monthly; no seed capital services it		the 1,000,000-share fully-diluted table	
C14	Round: \$6M at \$54M pre / \$60M post, closing Sep 30, 2026; “Instruments on record: an uncapped SAFE with MFN or a 15% discount to the lead, converting at the lead’s terms. A board seat is on offer.”	investor-memo, faq Q5, forwardable-blurb	Reconcile the stated \$54M pre with an <i>uncapped</i> MFN SAFE (a valuation and an uncapped instrument are different promises); post-close: Form D filing	EDGAR Form D full-text search — checked this cycle: no Houmanoids filing exists on EDGAR (Reg D §506 filings are due within 15 days of first sale; none yet may simply mean no closing yet)
C15	Series A \$60M at \$600M post March 2027; Series B \$600M at \$6B in 2028 — “the founders’ terms as of Aug 26, 2026, in no other room document”	investor-memo round table	Forward-looking; only the comp-bucket sub-claims are testable (see C79–C81)	n/a today
C16	Balance sheet “1870 Due from Shareholder AC \$11,141.79” (company receivable from a shareholder, initials matching Afik Cohen)	financials-closed-package-pdf	Confirm counterparty and repayment terms	Private; question for management
C17	QSBS framing: “Hou Ventures LLC — Taylor Hou’s entity for QSBS stacking”	cap-table	Consistency with §1202 mechanics (aggregate gross assets, original issuance) — a tax-law reading, not a dataset test	Counsel-grade review; not a desk dataset

2.3 Historical financials (inception Sep 2025 – Jul 31, 2026; finalized Aug 19, 2026)

#	Claim	Source doc	The test	Instrument
C18	Zero revenue and zero gross profit since inception; total expenses \$95,172.63; net loss \$115,083.35 (incl. \$21,518.02 interest); no payroll or salary line anywhere (largest lines: management consulting \$19,900.08, AI software \$5,662.26, business meals \$12,773.06, rent	2.1 package PDF	Internal tie-outs (the room says a CI check re-derives every subtotal); note the join: a workers’-comp policy exists (C63) against a P&L with no wages	Arithmetic on the extracted P&L (ties); bank data private

#	Claim	Source doc	The test	Instrument
	\$11,605.65, robot repairs \$4,243.75)			
C19	Cash \$10,553.08 at Jul 31, 2026 (Mercury); bridge = \$77K August “research-unit sale — a one-off equipment sale... not customer revenue” (\$50K received Aug 21; \$27K scheduled Aug 24)	2.1 bridge note	Identify the buyer and the unit sold (a “research-unit” buyer at \$77K is a counterparty worth naming)	Question for management; no public trace expected
C20	Fixed assets “Robots Not Yet in Service \$175,564.76” at Jul 31, 2026 (vs \$65,919.66 at Dec 31, 2025) — while the room documents robots deployed in the field from Apr 2, 2026 (Levi at Fern-View; Somy; Leo) — i.e., the books carry every robot as not-in-service	package PDF + demo pages	Accounting-policy question (when does a K9 enter service / start depreciating); count implied units at the ~\$30k machine / \$40k all-in claims: \$175.6k ≈ 4–6 units	Question for management; cross-doc join (done)
C21	Other assets: Advance to Houjiyuan Technology \$225,000.00; Advance for Equipment Held in China \$34,091.49	package PDF	Join to the China chart: Hou Jiyuan (Shanghai) Technology is in the <i>domestic</i> chain (Chen Dongyun → Kediwei → Haozhitong → Hou Jiyuan), not owned by Houmanoids, Inc. — the US company’s largest asset besides robots is an advance to an entity outside its ownership	Cross-doc join (done); Hou Jiyuan USCC 91310104MAG0JCTX7 A via Chinese registry; recovery terms = management question
C22	Liabilities \$571,425.97 vs assets \$456,351.12: negative equity –\$115,074.85	package PDF	Ties ✓ (done)	Arithmetic
C23	“An updated package closing Aug 31, 2026 — the first full twelve months — replaces this one in September”	2.1	Time-gated: request the August close; check the \$77K sale’s classification	Data room re-check

2.4 Forecast & unit economics

#	Claim	Source doc	The test	Instrument
C24	Gross margin per K9 at \$6,000 list: year-1 cost of revenue \$1,694 (depreciation \$1,111 [\$40k/3yr], technicians \$333, teleop \$250, parts \$0) → 71.8% GM; year-2 adds parts \$590 → 61.9%	2.2 financials-forecast	Every input is a planning number; the room itself labels them “what we think the unit economics will be”; the committed test is the Rapides monthly actuals table	Time-gated (Rapides data); no public instrument
C25	\$40k all-in per deployed unit = ~\$30k machine + deployment labor, telecom stack, custom backpack, edge GPU	2.2 assumptions	Price the M20 platform: import records for Deep Robotics units; China-side ¥1,393,300 for six K9s + docks + batteries + 2 other robots + edu unit implies a per-K9 figure well under \$30k (mixed basket — not conclusive)	CBP bill-of-lading data (Panjiva/ImportGenius-class) for Deep Robotics/Houmanoids consignments; note the room says early units flew as checked luggage (no BOL trace)
C26	One order of 75 K9s at \$40k = exactly \$3M placed at close (60-day ocean lead; no staging); reorders pause below a \$1.5M cash buffer	seed-bet, 2.2	Post-close observable: container shipments Oct 2026 (timeline) → customs records; FTZ admission records	CBP/BOL data; FTZ Board annual report (England Airpark zone activity); Sentinel-2 on the site (time-gated)
C27	Plan case: Oct 2026 revenue \$3,000, expenses \$3,061,000, cash \$2,972,000, fleet 55 → Jun 2028 revenue \$430,800/mo, cash \$1,532,400, fleet 156; trough \$1.50M Sep 2027; breakeven Mar 2027	2.2 Plan table	Model-internal: rows reconcile (Net = Rev – Exp – Reinvest; one-off \$30k deposit inflow in Oct Net) — spot-checked ✓	Arithmetic (done)
C28	Stress case: 12 deploys/mo cap, \$2,500 site rate, 75% sponsor fill → Jun 2028 \$252,350/mo revenue, cash \$1,510,010, fleet 111; breakeven Jul 2027	2.2 Stress table	Same	Arithmetic
C29	Downside cases: No-RPSO and zero-sponsorship both → \$2.01M cash and \$55,000 MRR at Jun 2028; 6-month slip →	2.2 downside table	The two flat cases sharing a cash line is the model's own admission the \$3M order is sunk regardless; the load-	Arithmetic; management question on buffer governance

#	Claim	Source doc	The test	Instrument
	\$3.11M cash, \$206,200 MRR; mature burn ~\$43k/month; “cash never goes negative in any case”		bearing input is the \$1.5M buffer discipline	
C30	Unit payback: private ~13 months at \$3,000/mo (10 at \$4,000; ~7 at \$6,000); sponsor-funded public ~19 months	2.2 milestones	40,000/3,000 = 13.3 ✓; the 19-month public figure implies ~\$2,100/mo net capture — reconcile against the RPSO \$1,000 list rate (C44) and sponsor tiers of \$100–\$1,000 (C50)	Arithmetic join (tension noted §4.6)
C31	Field cost \$370/K9/mo at 60 deployed (two techs at \$120k/yr fully loaded + two vehicles ~\$1k/mo each = \$22k/mo ÷ 60); scaling rule: one tech + one vehicle per ~30 dense deployments	seed-bet operating model	Louisiana technician wage reality-check	BLS OEWS Alexandria LA MSA (installation/repair occupations); the \$120k fully-loaded figure is ~2x the local median for comparable roles — a checkable gap in the company's favor
C32	Teleop \$15k/mo = six operators at \$2,000/mo all-in (Brazil x2 shifts, Manila x1) + \$3,000 manager; \$250/K9 at 60, \$150 at 100; staffed ceiling 48 hopper-minutes/K9/day	seed-bet	BPO wage benchmark (\$2k/mo all-in for 8-hour shifts in Brazil is at/above market — plausible); note hiring plan names only two Brazil teleoperators today, no Manila presence	Public BPO wage data; LinkedIn
C33	Failure planning: 1 actuator replacement per K9 per month at \$440–735/part; warranty covers parts year 1; 3-year extension “on the table”; above ~1.3 failures/K9/mo the repair mornings saturate	seed-bet	The three field failures documented in ~4 months on ~3 deployed units (Fern-View hip actuator May; LSA-floor swap Jul; the pilot-ending failure) are the only actuals in the room — consistent with the planning rate's order of magnitude	Room's own repair anecdotes (done); Rapides actuals time-gated
C34	Multi-K9 discount: two K9s \$10,800/mo, three \$14,400/mo; “pricing started at \$1,000/mo and quoted price points have run up to \$5,000/mo”; sponsor-funded public sites	2.2 assumptions	Quote-history is CRM-private; the signed record is C41–C46	Private (CRM)

#	Claim	Source doc	The test	Instrument
	modeled \$600 ramping to \$3,000/mo			
C35	Human-patrol comp: 24/7 patrol ≈ \$20K/month in Houston (“three full-time shifts, gap coverage, a manager slice”); China K9 rate ¥30,000/mo ≈ \$4.4K “replacement cost”	china-addendum, market-one-pager	Recompute: 4.33 guards/post × \$25–35/hr loaded ≈ \$16–24k/mo ✓ range-consistent	BLS OEWS security-guard wages, Houston MSA (public)

2.5 Pricing, pipeline & customer agreements

#	Claim	Source doc	The test	Instrument
C36	List price \$6,000/K9/month (editable page default); “We charge a flat \$3K per dog per month (~\$36k ACV)” (blurb, rev 3, Sep 2); “RaaS at \$5K/dog/month (~\$60K ACV/dog)” (team page, Aug 26) — three different headline prices across three room documents in the same week	2.2 / forwardable-blurb / team	Internal-consistency finding §4.3; the resolving fact is the signed-paper record below	Cross-doc join (done)
C37	Pipeline: 144 prospect accounts (66 law-enforcement); 76 actively staged; funnel 57 initiated → 13 demo → 4 LOI → 2 pilot (+68 unstaged); modeled \$5.57M MRR / \$197M contract value across 1,940 K9s — footnoted “indicative sizing, not contracted revenue,” CRM-computed at full target scope	5.1 kpi-pipeline-snapshot	Private CRM; the testable members are the named accounts below	Named-account instruments below
C38	LOI ledger (canonical, founder-confirmed Aug 16): 3 signed · 4 pending ; the blurb (rev 3) claims “8 LOIs and 80 deployment sites in the pipeline”; market page: “80+ deployment sites”	5.1 vs forwardable-blurb	Count join (finding §4.4): 3+4=7; “8 LOIs” exceeds the canonical ledger by one; “80 deployment sites” appears derived from Eglinton 10 + RPSO 54–66 + others	Cross-doc join (done)

#	Claim	Source doc	The test	Instrument
C39	Largest modeled accounts: Houston ISD 550 K9s / \$1.65M MRR (demo stage); Equity Residential 318 K9s / \$954k MRR; RPM Living 920 K9s / \$2.76M MRR / \$99.4M over 36 months; Rockwell Management ~20 communities / 5,015 units / \$60k MRR / \$2.16M term (awaiting countersignature)	5.1	Existence of the counterparties is public; the <i>opportunities</i> are CRM-modeled at \$3,000 x full scope	Counterparty existence: trivially public. Scope: private
C40	LSA outreach wave: 32 sheriff's offices emailed Aug 4, 27 delivered; Lincoln Parish demo Aug 17; Calcasieu 64-school first wave targeted Jan 2027 "date pending confirmation"	5.1	Time-gated; parish procurement/board minutes if it converts	Louisiana parish board minutes; local press
C41	Amoriss LOI (signed Feb 2, 2026, Dropbox Sign; Ronair McQueen, Regional Operations Manager): 2 properties (Fern-View 2509 Culpepper Rd; Lawson Heights 5759 Harris Dr), min 2 K9s + 2 chargers; "monthly service fee per Robot in the range of \$100 to \$1,000, subject to final negotiation" ; 12-month anticipated term; Texas law; definitive agreement "not yet executed"; related-party: "Taylor Hou is a majority shareholder of Amoriss Louisiana's parent company and president of its board"	5.25	Registry-confirm the related party (officer/member match); property-owner confirm (Ritchie)	LA Secretary of State commercial registry (Amoriss Louisiana LLC); Rapides Parish assessor for both addresses
C42	First paying customer "as of September 1, 2026" is Amoriss at Fern-View, 24/7 patrol "under the signed LOI"	investor-memo Bet 2, faq Q4, blurb	Ask for the invoice/definitive agreement; the room's Aug 31 memo update and Sep 2 blurb both	Management question; unverifiable from room

#	Claim	Source doc	The test	Instrument
	— the same LOI whose only price term is the \$100–\$1,000 range and whose definitive agreement is unexecuted; the actual Sep 1 rate appears nowhere in the room		assert the customer without a rate	
C43	Eglinton LOI (letter Jun 17; signed Jun 26, 2026 by “Zanir,” President, zanir@virani.ae): 10 properties (5 with unit counts: 356/180/328/48/12; 5 commercial), 1 K9 each; 3-month free pilot per robot, then \$2,000/robot/month (\$20,000/mo at 10 units); cellular data billed separately; 2 properties excluded (one in Michigan “outside deployment area”)	5.30	Verify Eglinton PM and the 10 properties exist/are managed by it; signer identity (virani.ae domain)	TX SOS; Houston apartment listings/appraisal district records per address; OpenCorporates on Eglinton/Virani entities
C44	RPSO LOI (ink-signed Jun 17, 2026; Sheriff Mark Wood / Robert Beauregard): non-binding; pilot Spring & Fall 2027 semesters at no cost to RPSO ; ≥2 K9s per campus “for all Rapides Parish schools”; up to 120 K9s designated; post-pilot list \$1,000/K9/month (example: 120 K9s = \$120,000/mo) with sponsor/grant offset — “RPSO obligation: shortfall only,” “Goal: \$0 parish outlay”; affidavit required (R.S. 39:1753.1(C) + NDAA FY2019 §889); post-pilot donation of ~60 K9s to an RPSO-designated 501(c)(3) ; RPSO to issue an RFP under Louisiana procurement law;	5.24	The LOI’s economics (free pilot, \$1,000 list, 60-unit donation, RFP requirement) vs the room’s Rapides revenue modeling (\$120k MRR / \$1.44M yr-1 in 5.1; \$600→\$3,000/site in 2.2) — finding §4.5; sheriff/RFP verifiable	RPSO/parish public records; Louisiana procurement portal (RFP when issued); Sheriff Wood + Beauregard titles via parish site

#	Claim	Source doc	The test	Instrument
	“~Sixty (60) Rapides Parish schools... served by a single SRO”			
C45	RPSO pilot services agreement DRAFT (31 pp, unexecuted, counterparty review): covers 2026–2027 school year (a third timeline vs the LOI’s 2027 semesters and the forecast’s Jan 5, 2027 deploy-by date); no pilot fees; post-pilot \$1,000/K9/mo; RPSO may terminate for convenience; provider CGL US\$3M/occ / \$5M agg with a \$5M step-up; general liability cap fixed at US\$1M (super cap \$3M); covered-equipment affidavit is a delivery precondition	5.26	Draft-only; the binding test is execution + the affidavit	Data-room re-check; parish records
C46	AirGarage draft (9 pp, unexecuted; redline Aug 18, counter Aug 19): up to 2 robots at up to 2 SF sites, \$4,000/robot/month , 60-day pilot auto-converting to 12-month term unless cancelled; “Robots automatically record when a person comes into view” ; requires umbrella ≥\$4M and Tech E&O/Cyber ≥\$2M (neither on the current COI)	5.27	Execution status; the recording clause vs the compliance pages (finding §4.1); insurance delta (finding §4.9)	Data-room re-check; koop.ai COI vs draft requirements (join done)
C47	RPM Living draft (14 pp, unexecuted; counterparty entity a placeholder): pilot fee US\$3,000/month per deployment; defaults audio recording OFF, facial recognition OFF, biometrics OFF; [30]-day video retention placeholder; “Insurance-Sensitive	5.28, 5.1	Execution status; RPM Living scale (~920 communities / ~218k units) is public	rpmliving.com / NMHC rankings (public); draft status private

#	Claim	Source doc	The test	Instrument
	Change” regime; two free 1-month pilots (Ashford + Rock Creek) proposed for September start			
C48	Fern-View free pilot Mar 13–Aug 2026 “stopped by a hardware failure,” no revenue to date ; K9 Leo moved to RPSO detention center testing (not paying); live units today: Somy on a team member’s Houston neighborhood patrol; Leo at the detention center	5.1, faq Q4/Q6	Zero paying deployments existed at room date; first cash revenue is modeled for Oct 2026 (RPM) — the Sep 1 Amoriss claim (C42) is the only earlier one	Room’s own admissions (done)
C49	Customer references: Robert Beauregard (RPSO — “strongest call”); Matt Ritchie (Fern-View asset owner — also the 2,400-share advisor, C12); Ronair McQueen (Amoriss ROM — employee of the founder-affiliated operator)	5.2	Two of three references are related parties on the company’s own documents	Cross-doc join (done); reference calls private
C50	Dealer proposal (live copy): service fee \$333/K9/mo to dealers; commission = one month of a 12-month contract (\$6,000 at list); partner-lot rate \$3,000/mo; sponsorship “\$100 to \$1,000 a month per K9” ; “The K9s will be manufactured in central Louisiana, at England Airpark in Alexandria” stated as fact; 55-campus map (48 public + 7 private) with full school roster; “60 K9s deployed in Rapides Parish”	5.31	Sponsorship tier vs forecast’s \$3,000 mature site rate (\$4.6); manufacturing statement vs “verbal, nothing executed” (\$4.8); school roster vs Rapides School Board directory	Rapides Parish School Board public directory; NCES CCD (school counts); cross-doc joins (done)
C51	Cleco proposal (live copy, non-binding, no response in room): “50+ schools, two	5.19	Counterparty status (no Cleco signature anywhere); “slated” vs	Cleco press/IR (public utility — any real sponsorship would surface); cross-doc join

#	Claim	Source doc	The test	Instrument
	Cleco K9s each... growing to about 200"; "Deployment is already slated to go live with the Rapides Parish Sheriff's Office and the Rapides Parish School Board. The proof of concept is in place."		non-binding LOI + unexecuted PSA	
C52	QR funnel: every K9 wears a QR → public per-robot page (houdi.ni/k9/leo-houston-tx live); walk-up lead capture attributed per robot; "a private benefactor funded a full school deployment" (unprompted community capital)	5.18, 5.22	The Leo page is publicly fetchable now; the benefactor claim names no school, amount, or date	Direct fetch of houdi.ni/k9/leo-houston-tx (public); benefactor = management question

2.6 Product & technology

#	Claim	Source doc	The test	Instrument
C53	Platform: Deep Robotics M20 base; front/rear 720p video + ambient audio (Jabra mic, wake-word, two-way talk); "Streams are transient: Houdini has no recording, storage, or replay capability today"; only stored robot data = last-known GPS; role-gated live access; incident log timestamps	6 compliance-ferpa-ndaa	Contradiction check vs RPSO LOI ("real-time video streaming and recording "), AirGarage draft ("Robots automatically record when a person comes into view"), RPSO PSA draft (audio recordings as Customer/Student Data) — finding §4.1	Cross-doc join (done); code review private
C54	Comms stack: Sierra Wireless AirLink XR60 (Semtech, US/Canada); Verizon primary / T-Mobile failover; Tailscale overlay; custom RJ45 harness replacing stock networking	6.2 ndaa-889-position	FCC equipment authorization for XR60 exists and is grantee-verifiable; XR60 assessed under the Mar 23, 2026 router covered-list entry per the room	FCC Equipment Authorization System (grantee: Sierra Wireless); FCC covered list
C55	Lidar: RoboSense (PRC); "Hesai (PRC) driver also present in vendor image — installed unit not yet confirmed per robot"; Hesai appears on DoD §1260H	6.2	Confirm Hesai's 1260H listing (public); per-unit installed lidar is a physical audit only the company can run	DoD §1260H published list (Federal Register/DoD site) — checkable today

#	Claim	Source doc	The test	Instrument
C56	Cameras: HLC Technology / HLC VISION (Hangzhou ODM; part HLCKJ-1525-S8268-V1.0, USB 2.0 robot-dog module, hzhccam.com/robot/); screened Aug 11, 2026 — Novatek chipsets, “not one of the five named §889 entities,” no Hikvision/Dahua affiliation found, not on FCC covered list or Entity List; “Screening is not attestation”	6.2	Re-run the screen: HLC corporate registry, shareholder chain, Entity List, FCC covered list	Chinese registry (USCC once pulled); BIS Entity List (public); FCC covered list (public); hzhccam.com
C57	“We cannot yet execute an affidavit-grade §889 certification on documentation alone”; batteries = Deep Robotics OEM packs, cell maker undocumented; “No CATL or BYD supply relationship exists”; FY2024 NDAA DoD battery ban (eff. Oct 2027) noted as DoD-only	6.2	The company’s own stated gap — the test is the BOM audit it commits to; the RPSO affidavit (C44/C45) is the forcing event	Time-gated; room re-check for the affidavit
C58	FCC posture: DA-26-786 (rel. Jul 28, 2026, PSHSB; WC 18-89, ET 21-232, EA 21-233) adds “foreign-produced advanced robotic devices except those granted a Conditional Approval” to the covered list; test is place of production vs FAR 25.101(a) domestic end product (>65% domestic component cost, COTS waiver); existing grants not revoked; authorized models keep shipping; routers covered since Mar 23, 2026; “American Security Robotics Act (Schumer/Cotton)” would bar government use; “~85% Chinese market share” per press	6.3 fcc-position	Fetch DA-26-786A1.pdf and the NSD/CA guidance PDFs; confirm the bill exists as described; NOTE: prior desk pass could not verify DA-26-786 externally (fetch walls) — still owed	docs.fcc.gov (direct PDF); congress.gov (bill text); NPR/The Hill archives
C59	Dimensional layer: “our onboard-autonomy partner has negotiated an exemption for robots that use Dimensional... the partnership provides that coverage” — room’s own label: “the founders’ understanding, not a cited fact. The instrument and its exact scope for our fleet are not yet in this room.”; dimOS open source (github.com/dimensionalOS/dimos); announcement x.com/stash_pomichter status 2082562322355417116 (Jul 29, 2026)	6.3	Fetch the cited tweet + repo (public); the exemption instrument itself remains undocumented anywhere	X/GitHub (public); FCC covered-list exception entries (public when granted)
C60	Conditional Approval intent: architecture pitched against the NSD’s cited risks (“a 2025 quadruped-firmware backdoor”);	6.3	The 2025 firmware-backdoor incident is publicly reported (Unitree Go1	Public security research archives; management question

#	Claim	Source doc	The test	Instrument
	own C2 plane, no OEM cloud, private enrolled-device overlay, signed command envelopes; “Authorization inventory... is an open workstream” — i.e., the company has not yet inventoried which FCC grants its own fleet ships under		backdoor, 2025); the inventory gap is the company’s own admission	
C61	FERPA: streaming-without-storage creates no education records; RPSO route excluded via 34 CFR 99.8 (law-enforcement-unit records); Rapides School Board has asked for “live + stored video with 30-day retention” (~66 campuses per CRM); open items include: no written retention schedule/student-data policy/public privacy policy; June 28, 2026 internal privacy review pending legal sign-off; “Some outbound sales materials say ‘FERPA-compliant storage for student media’” which the product does not yet have	6.4 ferpa-position	The sales-materials admission is itself a finding; the 30-day-retention ask joins to the recording contradiction §4.1	Cross-doc (done); counsel-grade review beyond desk scope
C62	Louisiana Act 288 / R.S. 39:1753.1(C): state covered-equipment analog; RPSO affidavit rides the same BOM evidence; 2 CFR 200.216 applies where federal grant funds are spent	6.5	Statute text public; whether RPSO/districts spend federal grant funds on this program determines the 200.216 hook	Louisiana legislature (legis.la.gov) — statute confirmable today; USASpending/grants for RPSO federal awards
C63	Insurance: ACORD 25 issued Aug 3, 2026 (term Aug 1, 2026–Aug 1, 2027): CGL \$1M/occ, \$2M agg (Pacific Employers); umbrella \$1M (Bankers Standard); WC/EL \$1M (Chubb Indemnity); broker Autonomy Insurance Services / koop.ai; certificate holder RPM Living c/o NetVendor; insured address 2906 Country Club Blvd, Sugar Land TX	6.6 insurance-coi	Carrier NAIC codes on the form check out (22748, 18279, 12777); deltas: AirGarage draft needs \$4M umbrella + \$2M cyber; RPSO draft needs \$3M/\$5M CGL; WC policy vs zero payroll on the P&L	NAIC company lookup (public); cross-doc joins (done)
C64	Tech dependencies disclosed in Afik’s IP-assignment Exhibit A: Deep Robotics M20 SDK + firmware; Google Photorealistic 3D Tiles + Maps APIs; LiveKit Cloud; GStreamer (LGPL); Anthropic + OpenAI APIs; “substantial portions of Company software AI-assisted”; initial Houdini code originated at Syndi Co (Robert Welch, CTO) and was assigned in	1.13, 1.10	LGPL/API-ToS exposure is a counsel item; the Syndi origin makes the Aug 15, 2026 Syndi IP assignment (Schedule A: no exceptions) load-bearing for the chain of title	Document read (done); code audit private

#	Claim	Source doc	The test	Instrument
C65	houmanoids.com domain acquired Aug 13, 2025; transferred to Houmanoids Inc. Aug 26, 2026 (six days before the room's latest revision); founder IP assignments executed Aug 25–26, 2026, effective back to Sep 18, 2025	1.12, 1.13	WHOIS history for the transfer; the just-in-time formalization pattern is a dated fact	WHOIS/DomainTools (public)
C66	Houdini = SIM2Real orchestration: browser teleop, mission pre-approval, fleet dashboard, incident log; four operating modes with liability allocation (Mode 1 physical controller ¼-mile radio; Mode 3 fully-autonomous pre-approved = Houmanoids holds liability); Fulshear trail sim public at houdini.ni/s/mp7OyaUNMN	rpso-loi, demo-fulshear-pd	The sim link and Leo's page are publicly fetchable; the liability-allocation table is a draft-contract item	Direct fetch (public); PSA drafts
C67	Autonomy status: first fully autonomous movement May 4, 2026 (Gogo at Dimensional SF); “most of what this section shows is teleoperated or supervised”; Houdini ran AgiBot's D1 fully autonomously in Shanghai Aug 10, 2026; “first few deployments primarily teleoperated”	5.16, timeline, seed-bet	Timeline of capability is the company's own; no external test until deployments run	Room record (done)
C68	Hardware fleet named units: Levi (first deployment Apr 2, 2026), Leo (ex-Fern-View, now RPSO detention), Somy (Houston/Fulshear), Gogo (dev unit); KALB press specs: “75-lb robot dog, 8-mile battery range”	demos, press	Match against Deep Robotics M20 published specs (33–35 kg ≈ 73–77 lb ✓ shape-consistent)	deeprobotics.cn public specs; KALB archive (live link)
C69	AI software factory: Gas City (Steve Yegge's open-source orchestrator), heavily modified; two “mayors” (Claude Code instances) run US/China ops; mayors read/write email, calendars, Slack, CRMs; “the same system wrote most of this data room”; Afik: only possible with “Fable, the newest Claude model from Anthropic”	3.5 ai-software-factory	Gas City's existence public; the ops claims are internal	GitHub (public); rest private

2.7 Manufacturing, FTZ & OEM

3. PUBLIC-DATASET COVERAGE MAP

Which of the ledger’s claims the desk’s instruments can test **today**, which are **time-gated**, and which are **private-only**. (No-silent-caps: the “degraded this session” column records instruments that exist but were unreachable in the current environment.)

3.1 Testable with desk instruments now

Instrument	Claims covered	Status / note
EDGAR Form D full-text + company search	C14 (the raise)	Already run: no Houmanoids filing on EDGAR. A §506 raise closing Sep 30 owes a Form D within 15 days of first sale — a dated tripwire, re-check mid-October
EDGAR XBRL (KSCP, URI 10-Ks)	C96, P1 base rate	Recompute the 138–171% and 7.9% ratios — the memo’s central chart is fully auditable
DoD §1260H published list	C55 (Hesai), C96 (Unitree Jun 2026)	Public PDF; checkable now
FCC Equipment Authorization System (grantee DB)	C54 (XR60), C58, C60 (fleet’s own grants — the company admits it hasn’t inventoried them)	Search grantee codes for Sierra Wireless and Deep Robotics/HLC; a fleet-model grant date vs the Jul 28 cutoff is decisive for “authorized model keeps shipping”
docs.fcc.gov (DA-26-786A1.pdf), fcc.gov NSD/CA PDFs	C58, C59	Direct PDFs cited by the room; prior session’s fetches were walled — still owed, flagged
congress.gov	C58 (“American Security Robotics Act,” Schumer/Cotton)	Bill existence/status
Delaware Div. of Corporations; TX SOS; LA SOS	C1, C3, C41 (Amoriss Louisiana LLC officers/members → Hou), C77 (Syndi/Fyxed/Amoriss entities)	LA commercial registry is the single highest-value pull: it independently closes the Amoriss related-party loop the room self-discloses
Rapides Parish assessor / property records	C12, C41 (Fern-View 2509 Culpepper Rd; Lawson Heights 5759 Harris Dr — Ritchie ownership)	County-level public data
Rapides Parish School Board directory + NCES CCD	C50 (55-campus roster; 48 public + 7 private), C44 (54 vs 60 vs 66 school counts)	Roster-by-roster diff resolves the count spread
Louisiana legislature (legis.la.gov); La. Legislative Auditor	C62, C95 (Act 288 text; Act 901; SRO survey)	Statute text public
BLS OEWS (Houston, Alexandria MSAs)	C31, C35 (technician \$120k loaded; \$20K/mo patrol comp)	Wage priors

Instrument	Claims covered	Status / note
Chinese corporate registries (gsxt.gov.cn + aggregators) with in-room USCCs	C5, C21, C81, C83, C84	Four USCCs provided; also checks the “administratively blocked” episode and the single-source Kediwei→Haozhitong link the room flags
WHOIS/DomainTools	C65 (domain acquired Aug 13, 2025; transferred Aug 26, 2026)	History lookup
Live public URLs the room cites	C52 (houdi.ni/k9/leo-houston-tx), C66 (Fulshear sim), C59 (dimOS repo, tweet), press links (KALB, Rapides Parish Journal, TikTok), C88 (JL Innovation)	Fetch-and-match; press links were verified live by the room Aug 4
Analyst/press sources named per-figure	C91–C93, C96	Quote-match against Ken Research, RH Perry, NCES, Mordor, Grand View, TechCrunch, WilmerHale
BIS Entity List / FCC covered list	C56 (HLC screening re-run)	Public lists
Japan houjin-bangou registry	C4 (KK existence)	Public
Handelsregister (DE)	C88 (JL Innovation 1.0, Frankfurt)	Public
NAIC company lookup	C63 (carrier identities on the ACORD)	Public

Degraded this session (instrument exists, unreachable here): OpenCorporates and general web search (CAPTCHA-walled), sec.gov direct (403s on some routes — data.sec.gov with the desk UA worked), press-outlet direct fetches (403). The LA SOS, FCC EAS, DoD-list, and China-registry pulls listed above were **not** executed by this fork — they are the mapped next actions, not completed verifications.

3.2 Time-gated

Event	Claims unlocked	Window
Form D filing (or its continued absence)	C14	~Oct 15, 2026
Container shipments of 75-unit order	C26, C74	Oct–Nov 2026 · CBP/BOL data
England Airpark December build	C70, C74, P3	Dec 2026 · Sentinel-2 + local press + FTZ admission records
Rapides deployment live (or not) by Jan 5 / spring semester	C74, P1, P7	Jan 2027 · local press, parish records, the QR pages themselves (each deployed K9 gets a public page)
RPSO RFP issuance	C44	Before end of spring semester 2027 · LA procurement portal
August 2026 financial close (“first full twelve months”)	C23	September 2026 · data room
SAIRI invention patent filing	C85	≤2 years · CNIPA
SIVA deployment	C87	Sep 23, 2026 · China press
FCC Conditional Approval application/grant	C60	open · FCC covered-list exception entries
Series A at \$600M+	P8, C15	~Mar 2027 · press

3.3 Private-only (management/diligence-session material)

- The Sep 1 Amoriss **rate** and invoice; the definitive Amoriss agreement (C42)
 - Note instruments for the Syndi/Hou Ventures loans; 83(b) elections; the stock ledger (C9–C13)
 - The \$77K research-unit buyer (C19); the Due-from-Shareholder AC terms (C16)
 - Recovery/settlement terms on the \$225,000 Hou Jiyuan advance and \$34,091 China equipment advance (C21); the US↔domestic-chain commercial arrangement “being finalized” (C83)
 - CRM records behind the 144/76/1,940-K9 pipeline (C37–C39); quote history \$1,000→\$5,000 (C34)
 - The Dimensional exemption instrument and its scope (C59); the AgiBot MOU draft (C72); the England Airpark term sheet when it exists (C70)
 - Deep Robotics warranty terms and the 3-year extension negotiation (C33); per-unit installed lidar (C55); battery cell provenance (C57); the BOM audit and the RPSO affidavit (C57, C45)
 - Houdini code review (recording/egress paths — the §4.1 contradiction is resolvable in an afternoon of code inspection) (C53)
 - Reference calls (C49) — noting two of three are related parties
 - Teleop staffing contracts (Brazil/Manila) (C32); Shanghai HQ lease and payor (C89)
-

4. INTERNAL-CONSISTENCY FINDINGS

Cross-document joins and contradictions. Facts only; every item cites the documents it joins.

4.1 Recording capability — three-way contradiction. The compliance overview and FERPA position state “Streams are transient: Houdini has no recording, storage, or replay capability today” and build the FERPA no-education-records position on it (docs 6, 6.4). The signed RPSO LOI lists “Real-time video streaming **and recording**” as a K9 capability and its PSA draft regulates “audio recordings” as Customer/Student Data (5.24, 5.26). The AirGarage draft states “The Robots automatically record when a person comes into view; retention of standard patrol [footage]...” (5.27). The FERPA page separately admits outbound sales materials advertise “FERPA-compliant storage for student media” that does not exist (6.4, open item 4).

4.2 US balance sheet vs “China priced at zero.” The China addendum instructs investors to “expect no financial upside from the China entities” and charts Hou Jiyuan (Shanghai) Technology inside the *domestic* chain owned by Chen Dongyun (8.3). The US balance sheet carries “Advance to Houjiyuan Technology \$225,000.00” plus “Advance for Equipment Held in China \$34,091.49” — \$259,091 of the US company’s \$456,351 total assets sit China-side, against \$10,553 of cash (2.1 package). The room prices the China side’s upside at zero while the US company’s downside exposure to it is its largest non-robot asset. Related: “Houmanoids China,” a USD-to-RMB conversion entity, is held by Taylor Hou personally (8.3).

4.3 Price-point spread across same-week documents. Forwardable blurb (rev 3, Sep 2): “flat \$3K per dog per month (~\$36k ACV).” Team page (Aug 26): “\$5K/dog/month (~\$60K ACV/dog).” Forecast (Aug 29): \$6,000 list, \$3,000 floor. Signed instruments: \$100–\$1,000 range (Amoriss), \$1,000 list (RPSO), \$2,000 after free pilot (Eglinton). Unexecuted drafts: \$3,000 (RPM), \$4,000 (AirGarage). Memo Bet 2 poses “Are customers willing to pay \$3,000+ per K9 per month?” and answers with the Amoriss LOI — whose only stated price term is the \$100–\$1,000 range.

4.4 LOI and site counts. Canonical ledger (5.1, founder-confirmed Aug 16): 3 signed · 4 pending = 7. Blurb (rev 3): “8 LOIs and 80 deployment sites in the pipeline.” Market page: “80+ deployment sites.” Same-page funnel stages (CRM as of Aug 4): 4 LOI / 2 pilot; map (Aug 17): 3 LOI / 1 pilot. The page itself notes the counts “can lag the ledger.”

4.5 RPSO economics: modeled revenue vs signed terms. KPI snapshot models RPSO at “120-K9 target scope (\$120k MRR / \$1.44M year-1)” (5.1) and the forecast books public-site revenue ramping \$600→\$3,000/site (2.2). The signed LOI provides: pilot **at no cost to RPSO**; a **\$1,000/K9/month** post-pilot list rate applied only to any sponsor shortfall with a “\$0 parish outlay” goal; a post-pilot **donation of ~60 K9s** (≈\$2.4M of hardware at the \$40k basis) to an RPSO-designated 501(c)(3); and a procurement step (RPSO RFP) before any commercial contract (5.24). None of the donation, the RFP step, or the \$1,000 list rate appears in the forecast, the memo, or the KPI page.

4.6 Sponsor arithmetic. The dealer proposal prices sponsorship at “\$100 to \$1,000 a month per K9” (5.31). The forecast’s Plan case fills public sites at \$3,000/month with 100% sponsor fill (2.2); the seed-bet floor case calls one parish “a ~\$1.9M ARR business by itself” (54 × \$3,000 × 12). At the dealer page’s own tiers, \$3,000/K9/month of sponsorship requires 3–30 sponsors per robot. The Cleco anchor proposal carries no counterparty response, and its fleet count (“2 per school, growing to about 200”) differs from both the LOI (up to 120) and the seed plan (54).

4.7 Three deployment timelines for Rapides. Signed LOI: pilot during “Spring & Fall Semester 2027” (5.24). PSA draft title: “**2026–2027 school-year** pilot” (5.26). Forecast/timeline: assembled December 2026, “deployed before the **January 5** deadline,” “ironclad” once the round closes (2.2, 8.2) — the January 5 date appears in no signed document.

4.8 Maturity language escalates as documents get more outward-facing. Inside the room: England Airpark is “verbally committed... nothing is executed” (4.4, 6.3); the AgiBot arrangement is “agreed in principle... non-binding MOU is in drafting... [Pipeline]” (8.2, 8.3); the Dimensional exemption is “the founders’ understanding, not a cited fact” (6.3). Outward-facing pages state: “The K9s will be manufactured in central Louisiana, at England Airpark in Alexandria” (dealer proposal, 5.31); “Deployment is already slated to go live... The proof of concept is in place” (Cleco proposal, 5.19); “That puts our supply on the right side of the July FCC rule and NDAA 1260H” (forwardable blurb, on the strength of the unexecuted MOU).

4.9 Insurance held vs insurance required by the company’s own drafts. Held (COI 6.6): CGL \$1M/\$2M, umbrella \$1M, WC \$1M. The AirGarage draft obligates umbrella ≥\$4M and Tech E&O/Cyber ≥\$2M (5.27 §8.4); the RPSO PSA draft obligates CGL \$3M/occ / \$5M agg with a \$5M

step-up (5.26 Art. 22). A workers'-compensation policy is held while the P&L from inception shows no wage or payroll expense (2.1). The COI's insured address (2906 Country Club Blvd, Sugar Land) differs from the corporate principal address (1500 Hadley St, Houston).

4.10 Founder-count and title drift. "3x founder" (blurb) vs "5x founder, all five on the record" (team page). "Most senior engineer at TikTok US" (blurb/team intro) vs "most senior **Android** engineer at TikTok US" (team detail). Taylor signs the Amoriss LOI as "President" (Feb 2026) and the Eglinton LOI as "Founder & CEO"/"CEO & Co-founder" (Jun 2026).

4.11 Stock ledger vs RSPA dates; executed documents with blanks. Common stock \$8.10 at Dec 31, 2025 equals 810,000 shares — the three Dec 13, 2025 RSPAs for Afik (400k), Hou Ventures (400k), and Syndi (10k) — while OCTOPUS's 40,000 shares (RSPA also dated Dec 13, 2025) only appear in the Jul 31, 2026 figure (\$8.50 = 850,000) (2.1 package vs 1.6.x). The OCTOPUS RSPA body leaves the share count and vesting anniversary blank ("purchase _____ shares"; "first anniversary of _____"); the Syndi RSPA body also reads "purchase _____ shares" (1.6.3, 1.6.4). The fully-diluted table (1,000,000) excludes both the converting Syndi note (~\$468K at a \$10M cap $\approx$ 4.5%+ post-conversion) and any SAFE issued in the raise (1.5, 2.1).

4.12 Proof-of-life vs live-state. Memo Bet 2: "We have a live deployment investors can watch running fully autonomously." FAQ Q6's live tiles are Somy — "Residential patrol, Houston, TX. Jerry is on the team" (an employee's neighborhood) — and Leo at the RPSO detention center, "Not a paying deployment." The only customer pilot to date (Fern-View) ran free Mar–Aug 2026 and "stopped by a hardware failure," with the K9 reassigned (5.1). Every revenue-bearing deployment is scheduled, not live, as of the room's latest update.

4.13 Robots not in service. The balance sheet classifies all robot fixed assets as "Robots Not Yet in Service" (\$175,564.76 at Jul 31, 2026) while the room documents field deployments from Apr 2, 2026 onward and the FAQ cites the P&L's own "Repairs & Maintenance Robots \$4,244" as field history (2.1 vs 5.5/8.2/faq).

4.14 One month's price for connectivity. FAQ Q7: "One monthly price covers all maintenance, repairs, spare parts, software, and connectivity." Eglinton LOI §3: "Variable, usage-based costs — including cellular data connectivity... are not included in the RaaS fee and will be billed separately" (faq vs 5.30).

4.15 The Rapides school-count spread. 54 SRO-staffed schools (seed-bet, timeline, forecast) · "Sixty (60) Rapides Parish schools... served by a single SRO" (RPSO LOI) · "60 schools under a signed LOI" (blurb) · 66 schools in the parish (seed-bet aside; FERPA page: "66 campuses" per the School Board's CRM record) · 55 campuses on the dealer map (48 public + 7 private). The LOI's "at least two (2) K9 robots per school campus, for all Rapides Parish schools" implies ≥ 108 –132 units against the seed plan's 54 (one per school).

4.16 Fire-watch: verbal pitch vs the room's own research (added by the desk — outside the room's four corners). In a verbal pitch to the principal, a founder stated the K9 "satisfies Louisiana fire-watch requirements." The room's fire-watch research file (C98) pursues only a

Houston, TX approval path (“in talks,” demo planned), states that no US jurisdiction was found to have approved a robot as a full human-fire-watch replacement, and correctly identifies “approved” under IFC §901.7 / NFPA 25 §15.5.2 / NFPA 101 §9.6.1.6 as AHJ discretion. Louisiana Act 288 (R.S. 39:1753.1), cited elsewhere in the room, is a procurement statute with no fire-code content. This is the same room-vs-outward-facing escalation pattern as 4.8, observed live in the fundraising channel.

5. OPEN QUESTIONS FOR MANAGEMENT

Corporate & capital 1. Provide the Syndi Co and Hou Ventures note instruments (rate, maturity, security), the executed conversion documentation for the Syndi note, and a pro-forma cap table showing the note conversion at the \$10M cap alongside the seed SAFE. 2. The instrument on record is “an uncapped SAFE with MFN or a 15% discount” — which instrument have actual signers taken, and how does an uncapped MFN reconcile with the stated \$54M pre? 3. Why do the executed OCTOPUS and Syndi RSPAs carry blank share-count (and, for OCTOPUS, blank vesting-date) fields, and when were the 40,000 OCTOPUS shares actually entered in the stock ledger? 4. Who were the “early investors” at the July 7, 2025 Denver session, and do any hold instruments or claims not on the cap table? 5. What is the “Due from Shareholder AC \$11,141.79” receivable, and on what terms? 6. Who bought the \$77K “research unit” in August 2026, and what was sold?

Related parties 7. What rate is Amoriss actually paying from September 1, and under what document (the signed LOI contemplates \$100–\$1,000/month and the definitive agreement is unexecuted)? Who approved the terms on the Houmanoids side? 8. Matt Ritchie is simultaneously advisor-shareholder, reference caller, and Fern-View asset owner: what does the Advisor Agreement (Aug 1, 2026) oblige him to do, and was the Amoriss/Fern-View deployment relationship disclosed to him as a conflict in either direction? 9. What are the repayment/settlement terms and timeline for the \$225,000 advance to Hou Jiyuan (Shanghai) Technology and the \$34,091 equipment advance — and what is the “commercial arrangement being finalized” between the US chain and the Chen Dongyun-owned domestic chain? 10. Who pays for the Shanghai headquarters (lease, fit-out, the 16-person China team), through which entity, and does any US-entity cash flow there beyond the advances already on the balance sheet?

Rapides economics 11. Reconcile the RPSO LOI’s terms — no-cost pilot, \$1,000/K9/month list, sponsor-shortfall-only obligation, RFP requirement, and the post-pilot donation of ~60 K9s to a 501(c)(3) — with the forecast’s public-site revenue ramp and the KPI page’s “\$120k MRR / \$1.44M year-1” for this account. Where does the donation (~\$2.4M of hardware at the \$40k basis) appear in the model? 12. What document establishes the “January 5 deadline,” given the LOI specifies Spring & Fall 2027 semesters and the PSA draft says 2026–27? 13. Which sponsors have signed anything, at what monthly amounts? (The dealer page’s tiers are \$100–\$1,000/K9/month; the Plan case needs \$3,000/site at 100% fill.) Has Cleco responded? 14. The RPSO affidavit (R.S. 39:1753.1(C) + §889) is a deployment precondition and the room says an affidavit-grade certification is not yet executable: what is the BOM-audit completion date, and what happens to the January timeline if attestations (HLC cameras, per-unit lidar, battery cells) don’t land?

Product & compliance 15. Does any K9 or Houdini component record today — under any mode, buffer, or vendor firmware path? Reconcile the no-recording posture with the RPSO LOI capability list, the AirGarage auto-record clause, and the Rapides School Board's 30-day-retention requirement, and provide the engineering privacy review of June 28, 2026. 16. Provide the FCC authorization inventory for the current fleet (grant numbers, grantees, dates) and identify which planned hardware changes trigger new authorizations under DA-26-786. 17. Provide the Dimensional exemption instrument (or its docket/citation) and its exact scope as applied to Deep Robotics-based fleets running dimOS-adjacent software. 18. What are the executed terms with Deep Robotics on warranty (the model assumes parts-free year 1 and negotiates a 3-year extension) and on CKD kit supply with telecom removed? 19. What insurance will be bound to satisfy the AirGarage draft (\$4M umbrella, \$2M cyber/E&O) and the RPSO draft (\$3M/\$5M CGL + step-up), and at what premium delta to the current Chubb program?

Pipeline 20. For each pending LOI (RPM, Lincoln Parish, AirGarage, Rockwell): current document status vs the Aug 19 snapshot, and any that have since died. 21. The blurb's "8 LOIs and 80 deployment sites": enumerate them against the founder-confirmed ledger of 3 signed · 4 pending. 22. Eglinton: who is "Zanir" (zanir@virani.ae) relative to Eglinton Property Management's registered officers, and what triggered the Michigan property's exclusion ("outside deployment area") given the density thesis? 23. What is the modeled-vs-quoted rate for each of the 1,940 pipeline K9s behind "\$5.57M MRR / \$197M" (the RPSO row alone appears to be carried at \$1,000/K9)?

Operations 24. The teleop model prices six operators (two shifts Brazil, one Manila) at \$2,000/month all-in; today two Brazil contractors exist. What is the Manila plan, and who employs the operators (US entity, KK, or a China-side entity)? 25. When do deployed robots enter service on the books (all \$175,564.76 sits in "Robots Not Yet in Service" despite five months of field history), and what depreciation life is actually being applied (the forecast uses 3 years; FAQ Q7 says books depreciate to zero over 2 years)?

Prepared as a claims-parse per the principal's instruction: "just parse all claims and write up a diligence thesis without a verdict." All figures are quoted from the data-room documents as mirrored 2026-09-02; instruments named are the desk's standard connectors. This file contains no recommendation.
