

PRIZE TABLES + VOL READS — ACTIVE BOOK

2026-09-03 · First full application of the ratified doctrine to every held/gated name with open forks. Probabilities are desk estimates, registered for Brier grading at each pack resolution. IV/RV from IBKR live snapshots this session.

Vol dashboard

Name	Px	IV	RV	IV/RV	IV pctile (52w)	Read
GIII	27.48	35.0	34.1	1.02	5–8th	Zero event premium, 28.3% SI, two dated forks — convexity FREE
TSSI	8.09	70.9	100.7	0.70	0th	IV at its 52-WEEK LOW while realized runs 100 — cheapest convexity on the book
CAI	25.05	66.0	73.3	0.90	6–14th	IV below RV; our Oct30 CC is exit-template (paid-trim), not vol-template — fine, but no more premium selling here
DFIN	48.87	42.2	46.7	0.90	~5th (13/26w)	Same: resting Oct55 CC offer is trim-priced; VRP negative
FWRG	11.73	53.6	53.0	1.01	9–18th	VRP gone vs when the Nov \$10 CSPs were sold; no additional put selling
ENOV	19.47	61.6	56.2	1.10	17–24th	Mild VRP only; below the CSP gate threshold

TSSI flag RESOLVED against the calls (chain-verified same day): the 0.70 IV/RV read was an artifact of the underlying-aggregate IV feed — the tradeable Dec chain prices at ~101% midpoint IV, exactly realized parity. Expression math: Dec \$10 call $C_{ours} = 0.25 \times \sim \3 bull payoff $\approx \$0.75 - 0.85$ vs \$1.25 ask → NEGATIVE edge; Dec \$12.5 worse. Calls REJECTED; the held 550 shares are the convexity at zero premium over fair. Tax overlay noted: Dec expiry would have been the only permissible tenor anyway (Jan'27 loss lands 2027, unusable against 2026 harvest). PRD now requires chain-level IV + real quotes before any convexity flag (rule 7).

FWRG — held 310 @ ~12.08 avg + short 2x Nov \$10 puts (forks: Nov 3 print, Nov 12)

Scenario	p	Price	Note
BEAR: traffic re-decelerates, covenant narrative returns	0.30	\$9–10	puts assigned = planned add at \$10; ladder sized for it
BASE: comps stabilize, whale thesis holds	0.45	\$12–13.5	carry + premium
BULL: comp inflection prints	0.25	\$15–17	+28–45%

EV $\approx$ +8% on stock; short puts convert bear into inventory at the court's own band.

CAI — held 450 @ 16.19, short 1x Oct \$30 call (fork: tripwire lot-2 $\leq$ 19.35)

Scenario	p	Price	Note
BEAR: growth scare, tape to tripwire	0.25	\$19–20	lot-2 add fires ~1,600 sh per band court
BASE: range	0.50	\$23–28	CC decays, +\$75 kept
BULL: re-rate through \$30	0.25	\$31+	100 sh called at 30 = the ratified paid trim, 350 ride

Asymmetry engineered by the band court: bear = planned add, bull = planned trim. EV $\approx$ +6–9%.

TSSI — held 550 @ 8.06 (fork: Dell flow-through evidence; no dated print near)

Scenario	p	Price	Note
BEAR: no order flow-through to TSS	0.30	\$6–6.5	–20–26%
BASE: partial flow-through	0.45	\$8.5–10	+5–24%
BULL: AI-server integration ramps with Dell backlog	0.25	\$12–14	+48–73%

EV $\approx$ +12% — widest EV on the book, matching the vol flag above (and the market disagreeing).

DFIN — held 740 @ 41.01, short 2x Oct \$55 call offers resting

Scenario	p	Price	Note
BEAR: deal/filing volumes roll	0.25	\$42–44	–10–14% from tape, still +5% on basis
BASE: steady regulatory calendar	0.55	\$47–52	carry
BULL: capital-markets reopening accelerates	0.20	\$55+	200 sh trimmed at 55 per template

EV $\approx$ +4% — lowest-variance name; the CC pair is the active management.

ENOV — held 112 @ 20.92 + staged add (fork: pack ENOV12026-11-05)

Scenario	p	Price	Note
BEAR: FY27 capex fear confirmed >\$220M	0.25	\$16–17	kill branch at pack
BASE: capex ~\$193M annualized run-rate holds (drained 9/2)	0.50	\$21–24	add branch
BULL: margin bridge + convert overhang clears	0.25	\$26–28	+34–44%

EV $\approx$ +10%; the 9/2 drain already moved bear probability down (capex fear refuted at H1 actuals).

GIII — staged 150 @ 27.42 (forks: 9/11 10-Q, 11/18 royalty, Dec print)

See deck v3: bear 0.30 / base 0.45 / bull 0.25, EV $\approx$ +7%, free event vol, CSP fails VRP, Dec add may route to calls.

Estimates coarse by design at first pass — each table tightens at its pack date and the probabilities get Brier-graded against outcomes. WYNN excluded: the structure IS the prize table (spreads with defined payoffs, graded by the WYNN-STRUCTURE pack). EMBC/LZ excluded: no position (entry suspended / band untouched).
