

UAMY pitch deck

Both benches' work is already in front of me, so I'll write the deck directly — no additional lookups needed. The court converged on REJECT, so the entry section carries reopen bands rather than entry levels.

PITCH — UAMY — PROPOSED VERDICT

REJECT — no position at \$5.34; reopen only on the evidence gates below. PROPOSED — PENDING ADJUDICATION.

What we believe

United States Antimony's \$57.3 million defense (DLA) order book is real, but it is not the insulation the original thesis hoped for. The 10-Q's contract note says each delivery order is priced when it is placed, at the market rate prevailing that day plus certain fees ([10-Q, sec.gov](#)). Only about \$12 million of orders existed as of June 30; roughly \$45 million — about 80% of the book — was placed in July and August, after antimony prices collapsed. So the book's dollars are reasonably secure, but they were struck near today's depressed prices, not at the \$31.71/lb of the first order. There is no hidden ~\$25 million of locked-in gross profit waiting in the second half.

What's left is an expensive commodity price-taker: roughly \$690 million of enterprise value against a \$60–75 million revenue guide (about 10× sales), a 7% gross margin quarter, an operating-loss run rate near \$28 million a year, stock compensation running at 37% of revenue, and management media appearances in the two business days before the guidance cut.

What the market believes

The stock has already traded the news. The Q2 report and guidance cut landed August 11; by the August 13 close the stock was at \$5.34, **up 7.44% on the day** — the market sold the cut hard (the stock is 73% off its \$19.71 high) and then bought the dip. The prevailing story appears to be a strategic-metals option: a US-listed antimony producer with government contracts, a \$62 million cash pile, and a stake in Larvotto, where the defense backlog is treated as proof the story works regardless of the antimony price. The bounce says a meaningful group of buyers reads the \$57.3 million book as insulation.

Why we might have edge

The one thing we did that the bounce-buyers likely have not: we read the contract mechanics in the 10-Q rather than the headline backlog number. "Pricing determined at the time each delivery order is placed at prevailing market rates" plus the July–August timing of ~80% of the orders means the backlog's economics track the collapsed spot price. The CEO's own forward framing on the earnings call — economics off "\$10 a pound" against \$4–6 feedstock — is consistent with that, not with \$31.71. We also

confirmed that none of the premium-priced DLA revenue was in Q2's numbers (\$2.6 million slipped to Q3 on invoice approval timing), so the reported 7% gross margin slightly *understates* the go-forward mix — a concession to the bulls that we sized and found insufficient.

Why it might be priced in

Symmetrically: at \$5.34 the stock has already given back 73% from its high, and our REJECT is a valuation-and-economics call, not a fraud or solvency call. The delivery orders are fixed-dollar once placed, so the second half and 2027 revenue is more secure than a pure spot-seller's. Q2's margin excluded the DLA pounds. The insider picture is mixed, not one-way — a director *bought* 12,500 shares at about \$7.45 in June (the red bench initially misread that filing as selling). If antimony prices recover, new delivery orders re-strike higher automatically. None of that makes 10× sales with negative carry ownable today; all of it caps our conviction that the stock must fall further.

What we checked ourselves

Claim	How checked	Found	Confirmed?
\$57.3M DLA book is fixed at \$31.71/lb, insulating H2 (original thesis)	10-Q Note 5, read via proxy after direct fetch was blocked (sec.gov)	Pricing set per delivery order at prevailing market rate + fees; ~\$45M of the book placed post-collapse (July–Aug). Our thesis erred: it extrapolated one early strike across the whole book	YES (mechanism); the ~\$45M timing split is plausible pending the subsequent-events note
Guide cut was “pricing only,” making the book either repriceable or unfulfillable (red bench's fatal kill)	Written 8-K/press release vs. the earnings-call transcript	The written 8-K gives two reasons: price decline AND a shift in timing of certain DLA deliveries — contradicting the CEO's “nothing to do with delivery times.” Red bench erred: it built its kill on the transcript over the primary document, inverting the court's own venue rule	YES — kill partially overturned; REJECT survives on other grounds
Tape “unreacted” at \$6.58 (original thesis)	Live re-strike, both benches	Stale by two sessions: \$5.34 close 8/13, +7.44%, flat after hours. Reacted and bounced	YES — thesis tape was void
Q2 results included premium DLA revenue	8/11 release verbatim	Zero DLA revenue in Q2's \$7.9M; the \$2.6M of June invoices got final approval in July, recognized in Q3	YES
Valuation	Share count and balance sheet from the Q2 release	~\$799M market cap – \$62.1M cash – \$46.7M Larvotto ≈ \$690M EV on a \$67.5M guide midpoint ≈ 10× sales; 7% GM; ~\$28M op-loss run rate; SBC 37% of revenue	YES
One-way insider selling (red bench, finding 5)	The actual Form 4s	The 6/17 Form 4 was a director purchase (Marinelli, 12,500 sh @ ~\$7.45). The 89,004-share disposal (Pagen) was in March. Red bench erred; insider picture is mixed. Promotion-timing point (media appearances before the cut) stands	YES — finding reduced

Claim	How checked	Found	Confirmed?
“Fulfill by year-end” was a hard deadline (thesis contradiction check)	Coleman order history	First \$9.9M order completed “nearly one year ahead of schedule” — schedules natively run past year-end; the language was aspirational. Our check erred	YES
Detector match: Chinese small-cap ramp-and-dump archetype	Feature re-check by both benches	Spurious — a feature-extraction error (operations are in Mexico , not Asia; Texas issuer, NYSE)	YES — not fired
10-Q unreachable (pack listed it 403-blocked)	Proxy fetch of EDGAR	Reachable; the pack’s coverage gap was closed by the blue bench, and the document decided the case	YES

PROPOSED ENTRY BANDS

No entry. Both benches land REJECT; the blue bench kills the long on economics even after overturning the red bench’s headline mechanism. No short either — the case is valuation, not fraud, and the tape already bounced. Position: FLAT, 0% of book.

Reopen bands (from the benches’ own math):

- **Evidence gate (primary reopen, blue bench):** per-shipment DLA 8-Ks showing realized prices of $\geq \$25/\text{lb}$ on ramping pound volumes, AND new delivery-order awards whose implied price per pound shows fees of $\geq 2 \times \text{spot}$. That combination would mean the guide is conservative and real premium economics exist.
- **Price gate (red bench):** if the evidence gate fires, the long case reopens **near the \$3.93 52-week low** — not at \$5.34.
- **Catalyst dates:** next earnings print **~2026-11-16 (UNCONFIRMED** — derived from a data feed, no company press release names it; confirm before relying on it). Interim catalysts are the DLA shipment/order 8-Ks, which arrive on the company’s cadence with no fixed dates.

ARMED SENSORS

(armed provisionally with this deck; session adjudication ratifies)

- price alert: fires below 3.93 (deck-provisional: 52-week low — red bench’s reopen zone for a long, valid only if the DLA evidence gate also fires)
- filing watch: 8-K until 2027-02-10 (deck-provisional: DLA shipment/order 8-Ks: realized $\geq \$25/\text{lb}$ on ramping pounds AND new awards implying fees $\geq 2 \times \text{spot}$ re)
- dated pack UAMY|2026-11-16: UAMY: Q3 2026 earnings print (feed-derived, no company PR yet) (date confirmed=False)

What remains unverified

- The ~\$45M July–August order-timing split is inferred from the \$12M as-of-6/30 figure in the 10-Q versus the \$57.3M “on our books today” from 8/11. The mechanism is confirmed; the exact split awaits the subsequent-events note or the Q3 10-Q.
- The **actual fee component** in DLA order pricing — “certain specific fees” is unquantified. If fees are large, the reopen gate could fire sooner than we expect.
- The **next print date (2026-11-16)** is feed-derived and unconfirmed.
- **Realized H2 \$/lb** on DLA shipments — the decisive forward number; no data yet.
- Housekeeping: the standing dashboard closing step (ledger upsert, edge classification, entry plan, scanner re-run) is still outstanding — both benches ran without shell access, and this session also has no shell. The caller must run it when adjudicating.
