

The American Housing Corporation

Series A Pitch Deck

We believe that the key to solving the housing crisis is building quality, missing-middle housing at scale.

Today, **extremely high construction costs** prevent real estate developers from building family-sized housing in the country's most dynamic cities and neighborhoods.

Missing Middle Housing

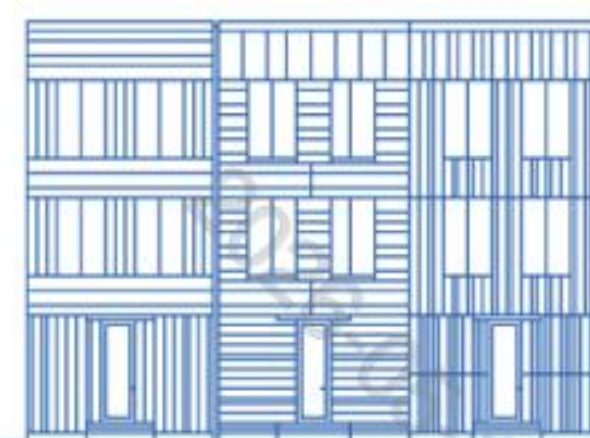

Detached Single-Family Houses

Duplexes & Fourplexes

Courtyard Apartments

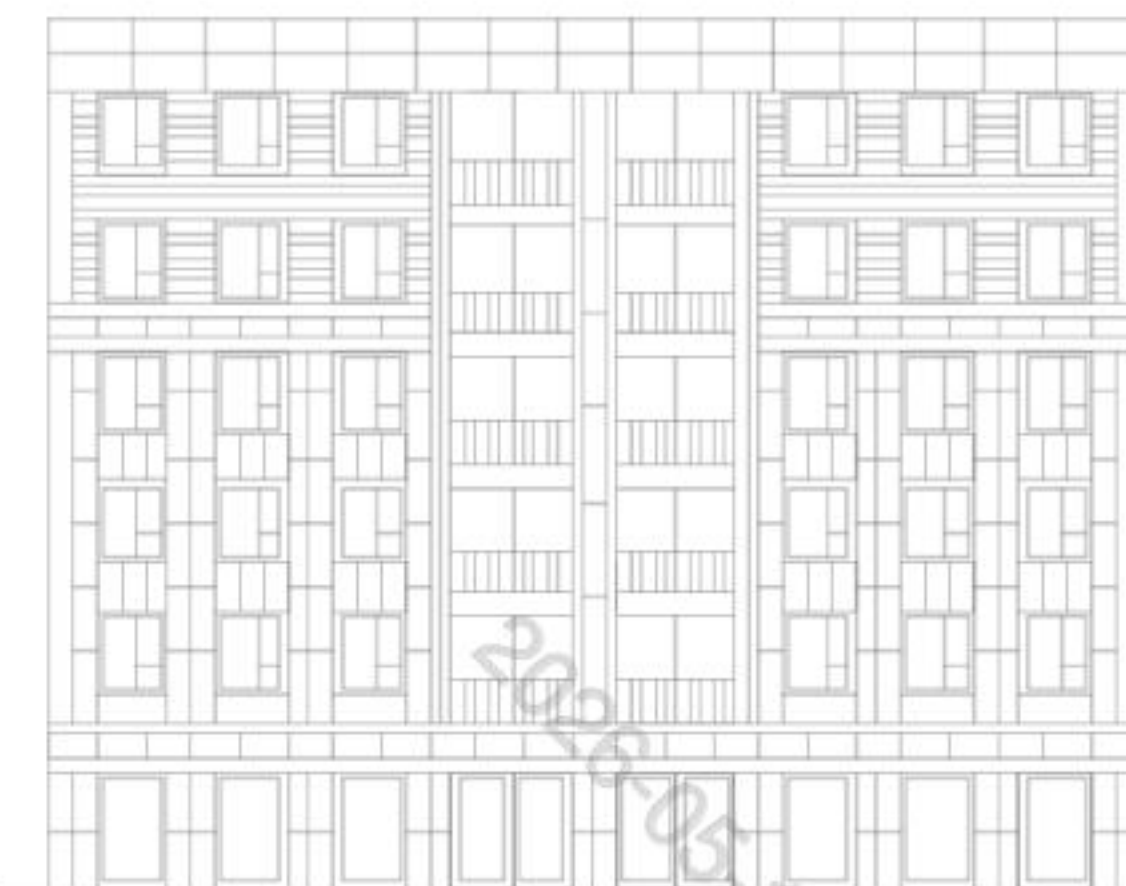

Rowhouses

Three Flats & Triple Deckers

Single-Stair Apartments

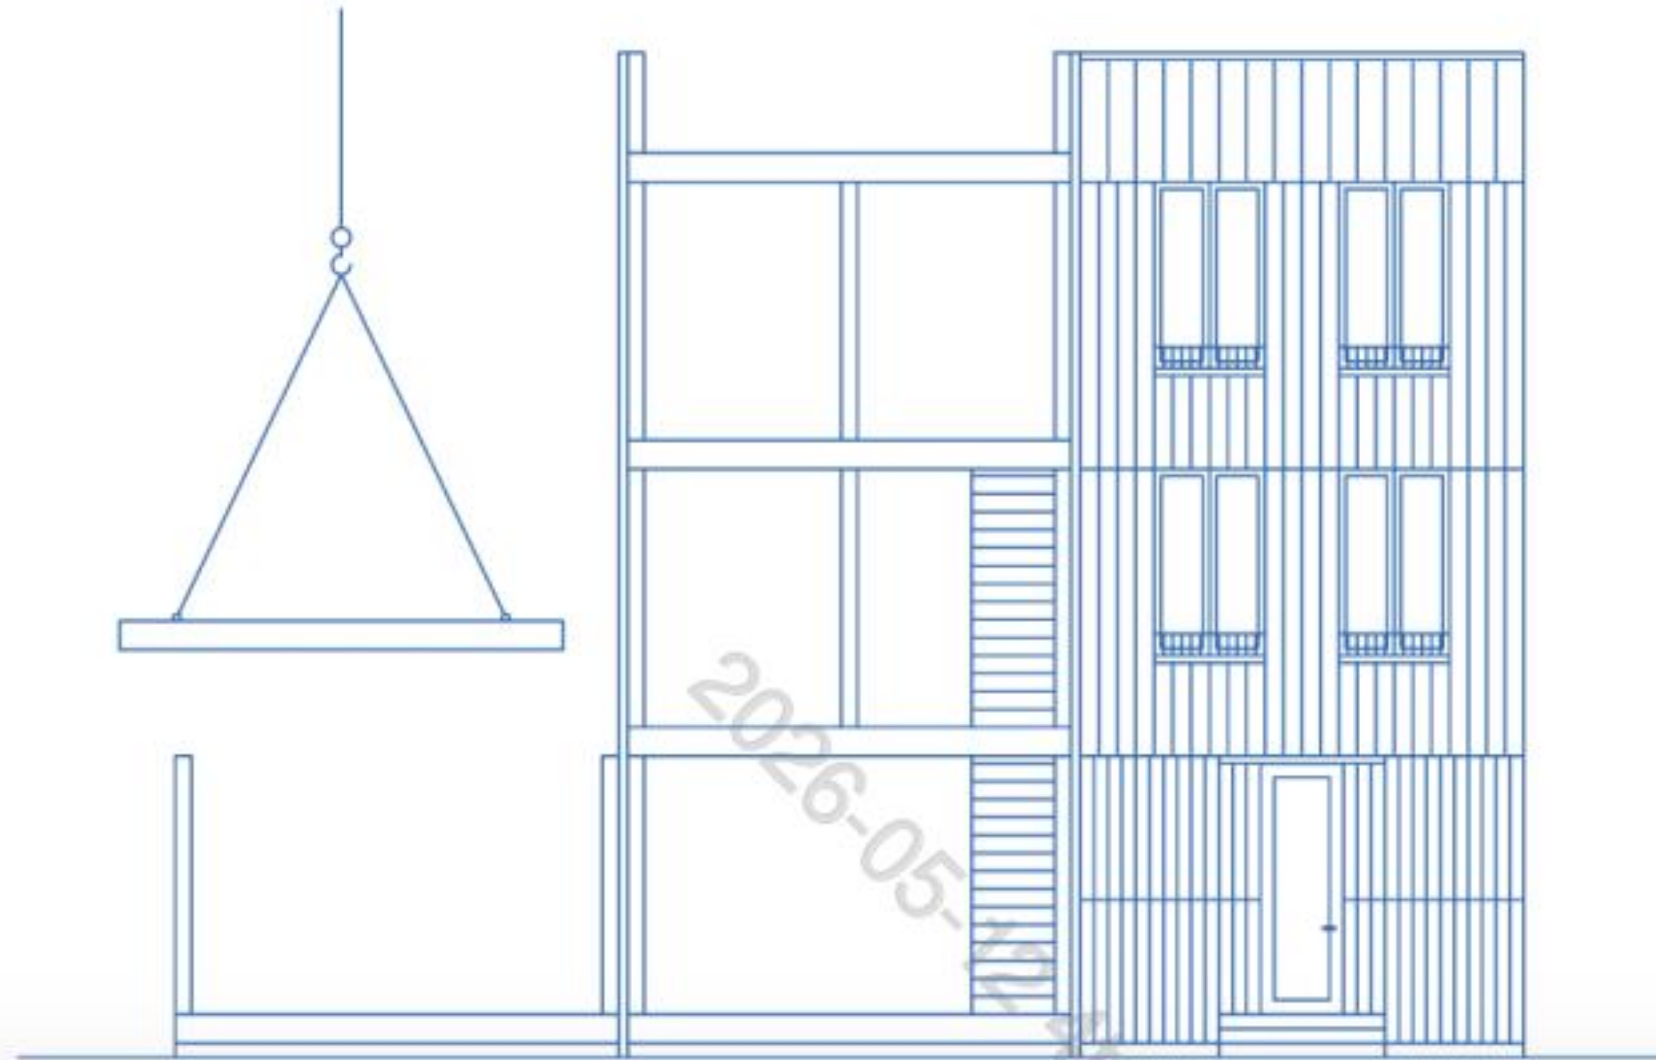

Large Apartment Buildings

The American Housing Corporation is a vertically integrated real estate development firm and housing manufacturer.

① Buy Land

② Build Homes

③ Sell Homes

We've developed a platform for mass-producing rowhomes and missing-middle housing for \$200/sq ft – nearly **half the cost** of big-city builders.

Building System

Factory-produced kit of parts for building International Building Code-rated housing.

Factory

Automated factory for producing Building System components.

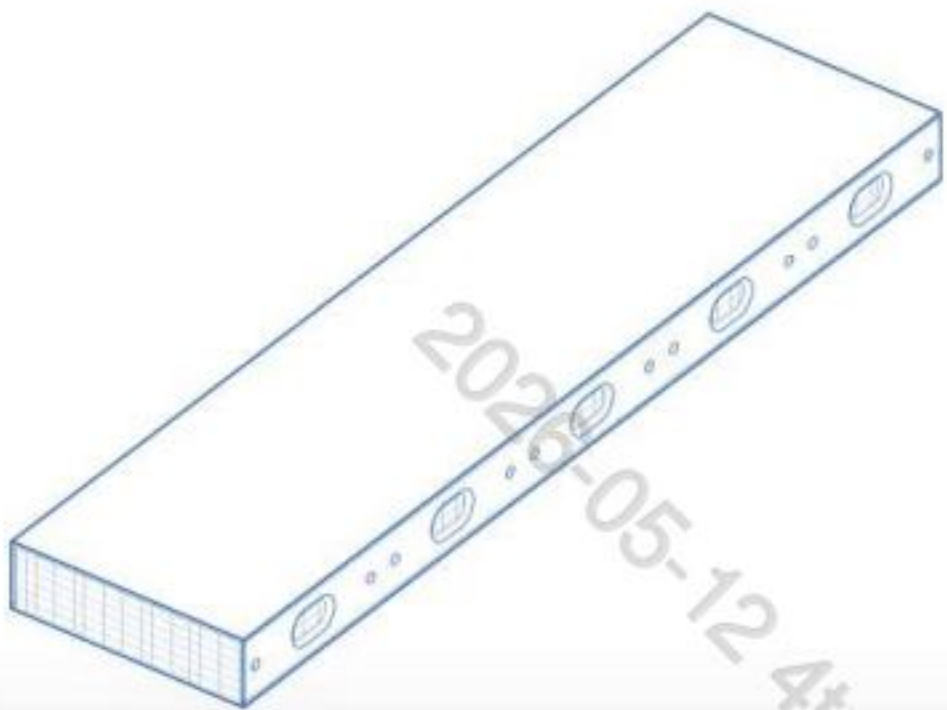

Alamo

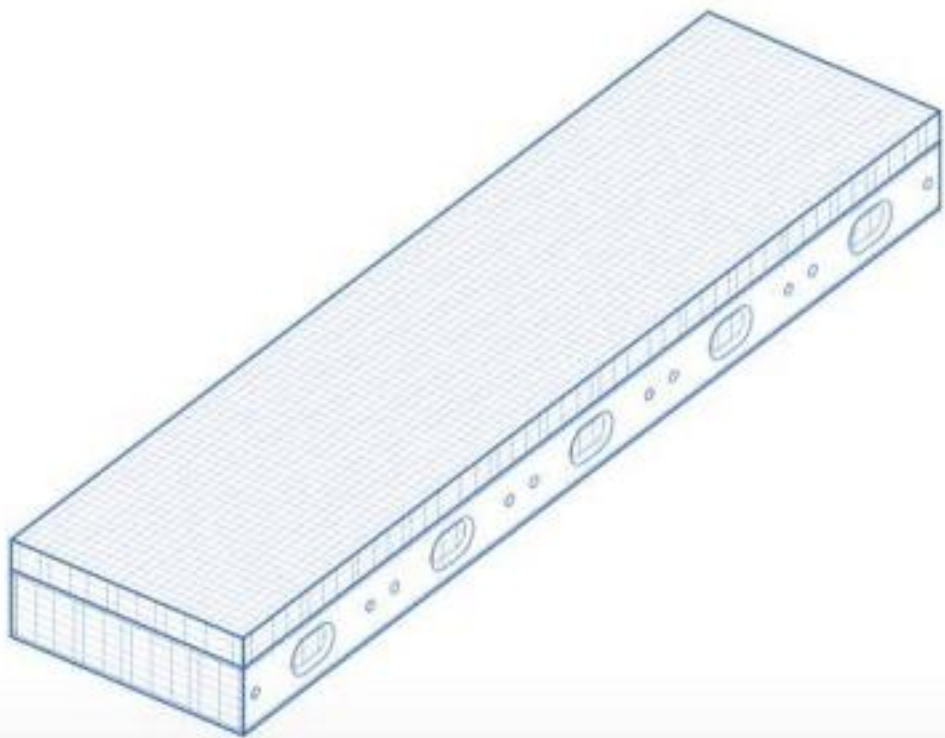

Software platform for underwriting, site planning, factory production, and onsite assembly.

The American Housing Building System consists of 5 core components.

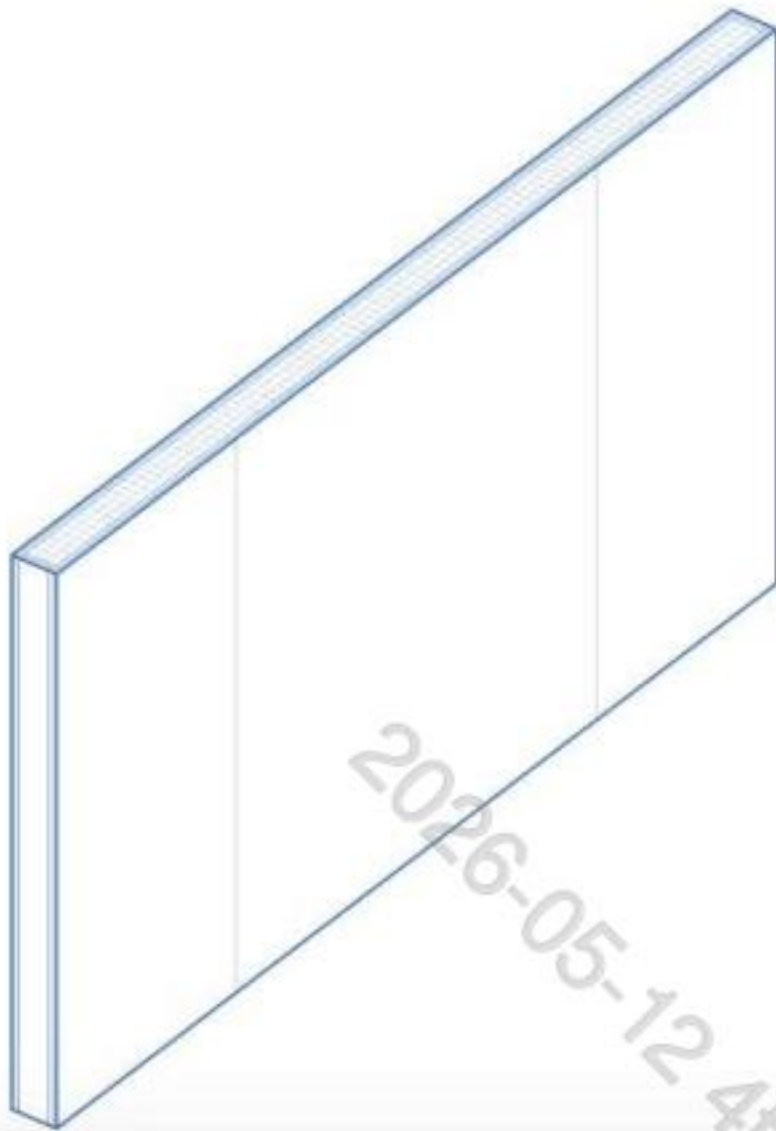

1
Floor panels

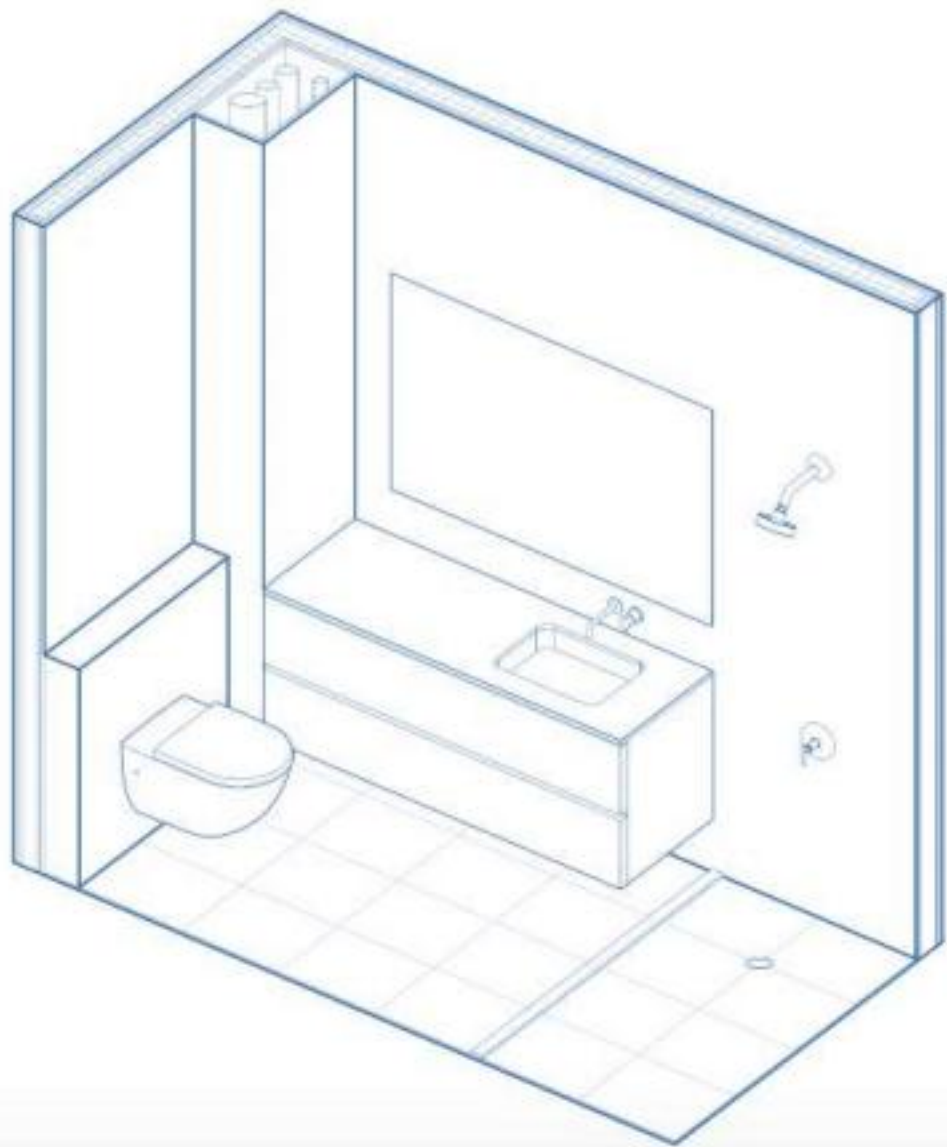

2
Roof panels

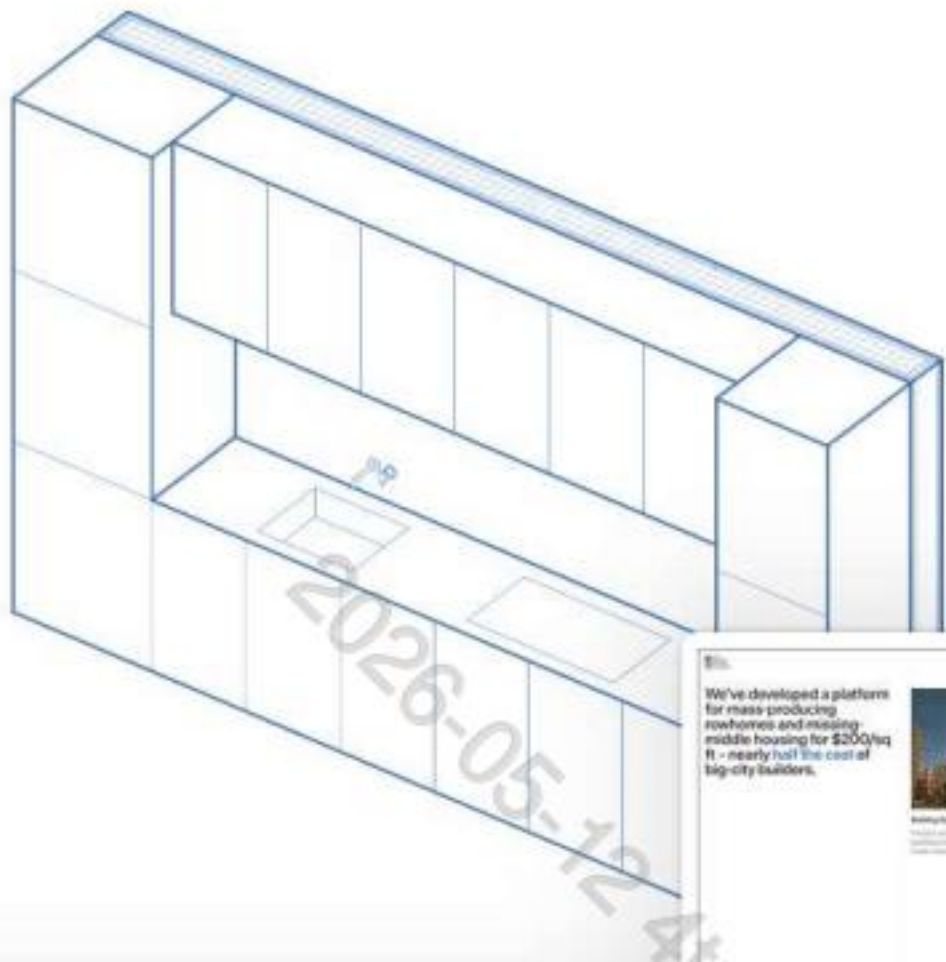

3
Wall panels

4
Bathroom modules

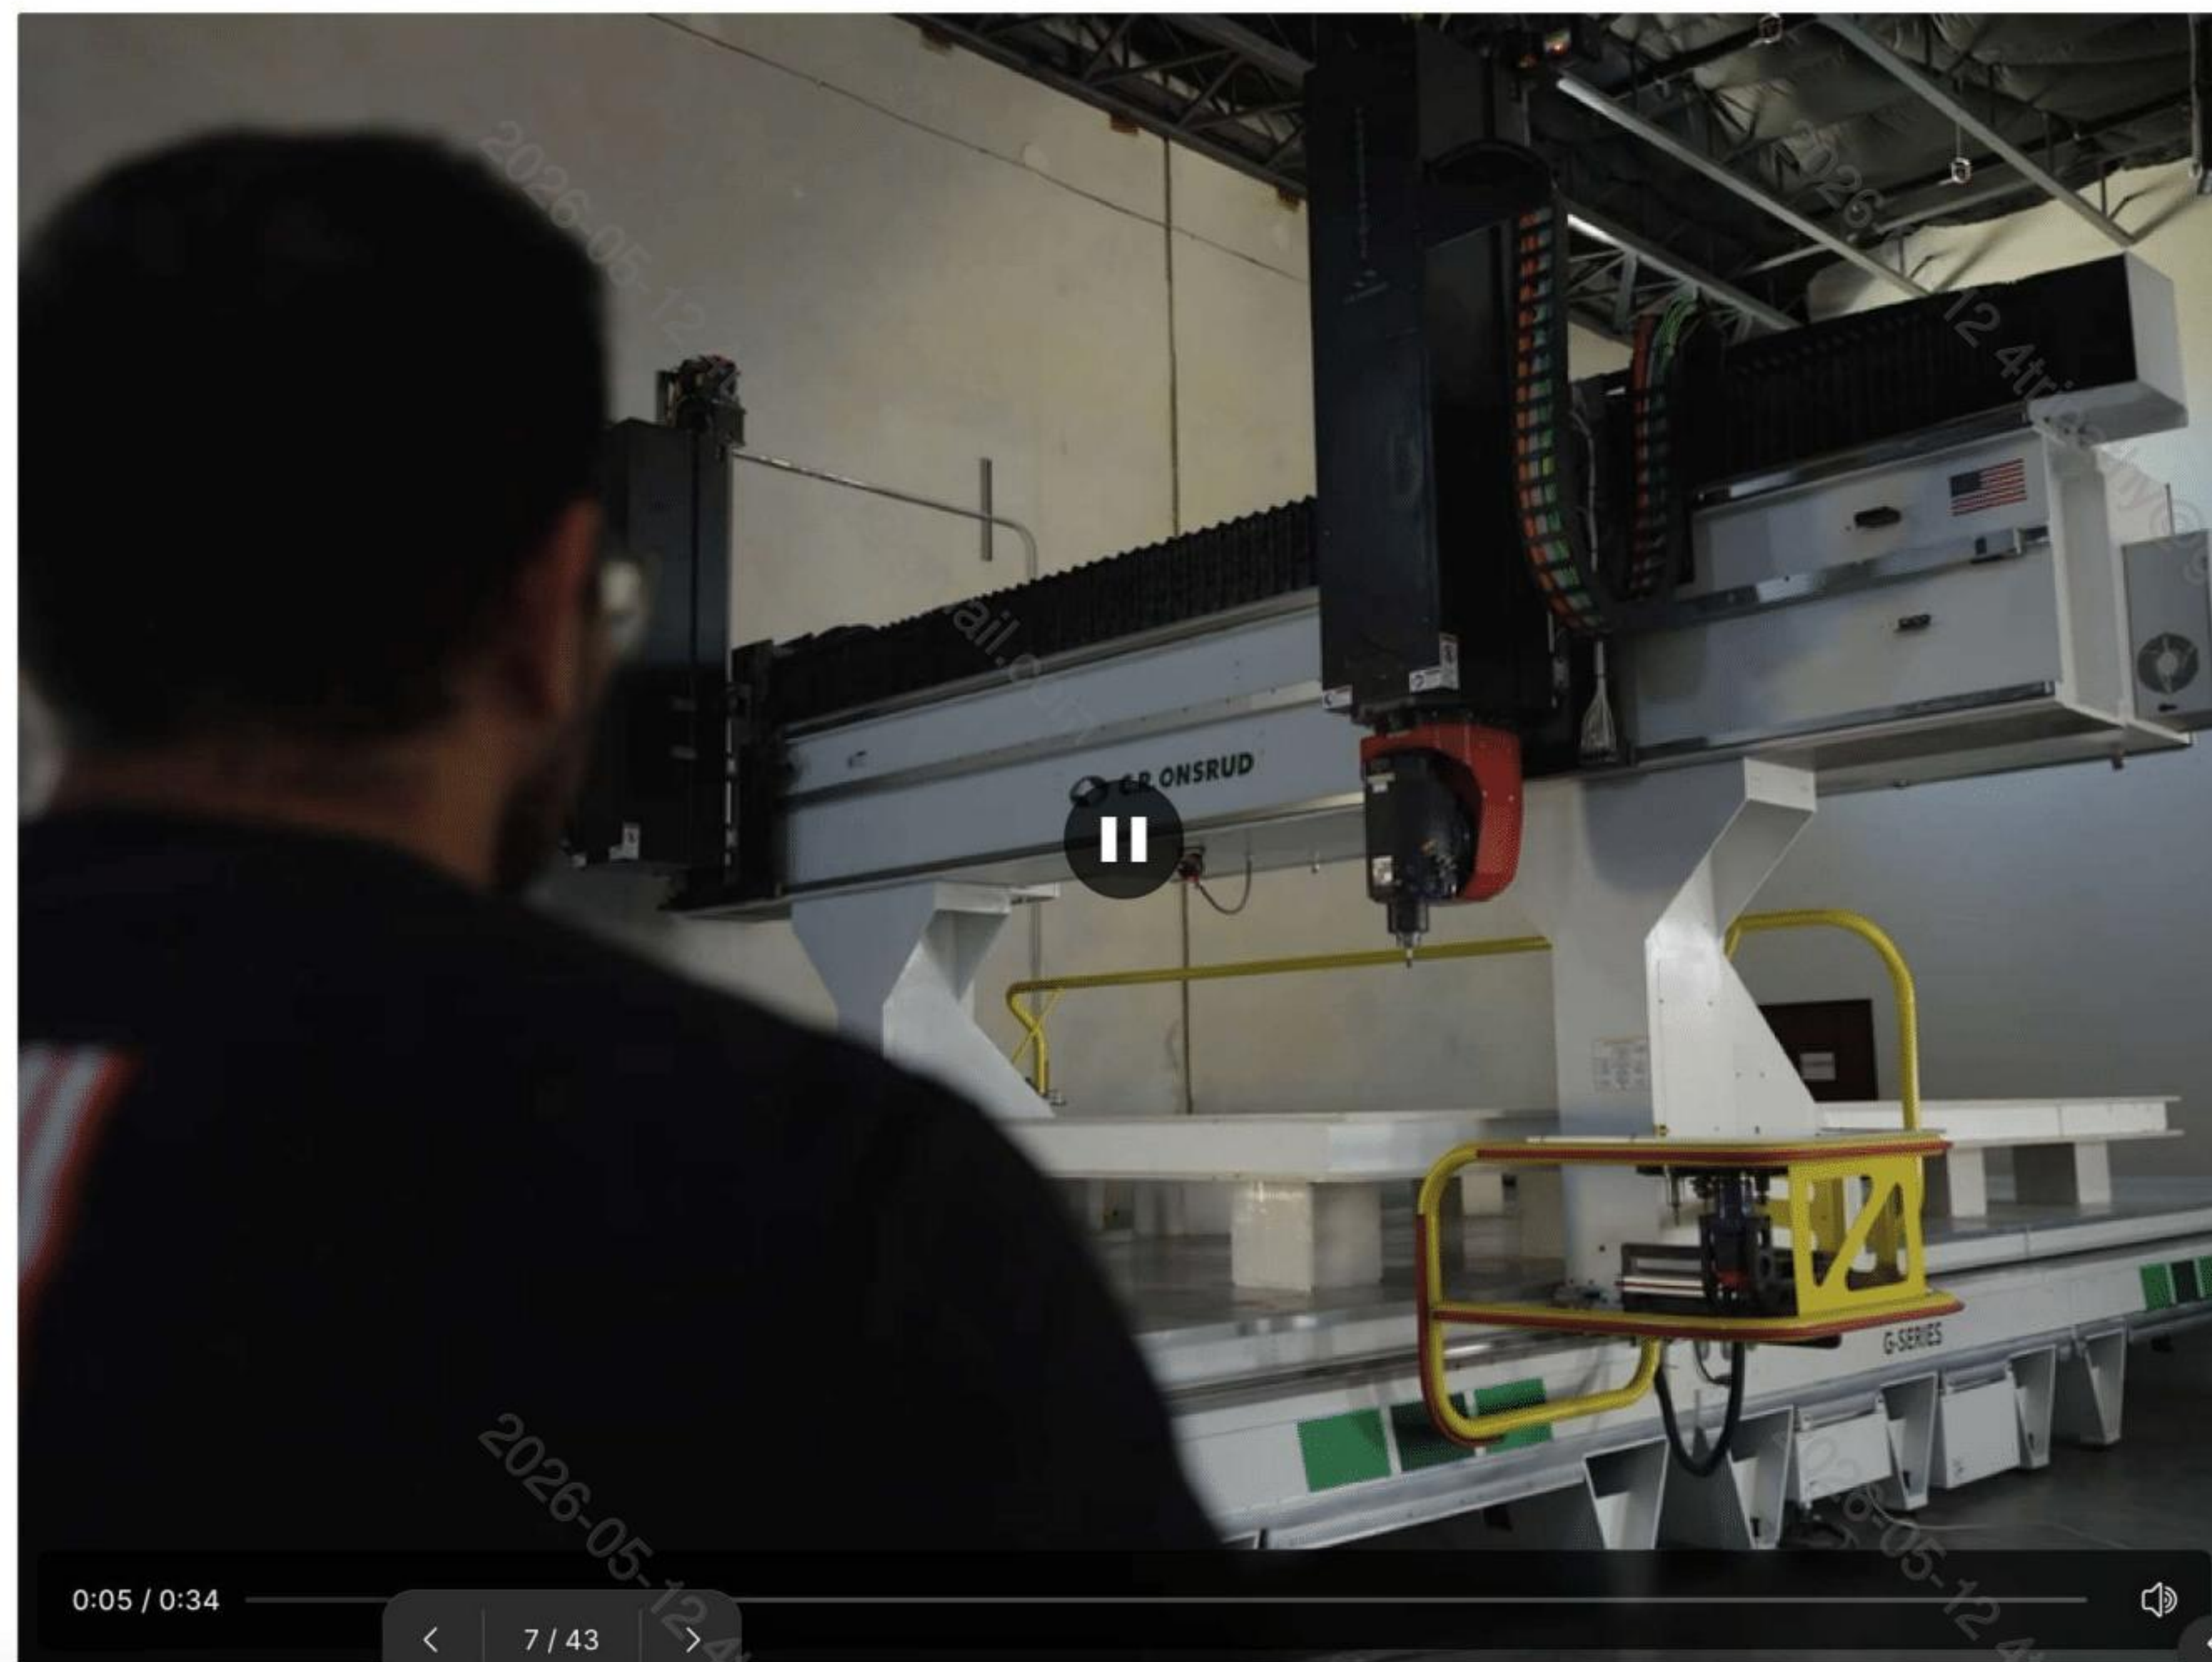

5
Kitchen modules

Each component of the Building System is manufactured in our Austin, TX factory.

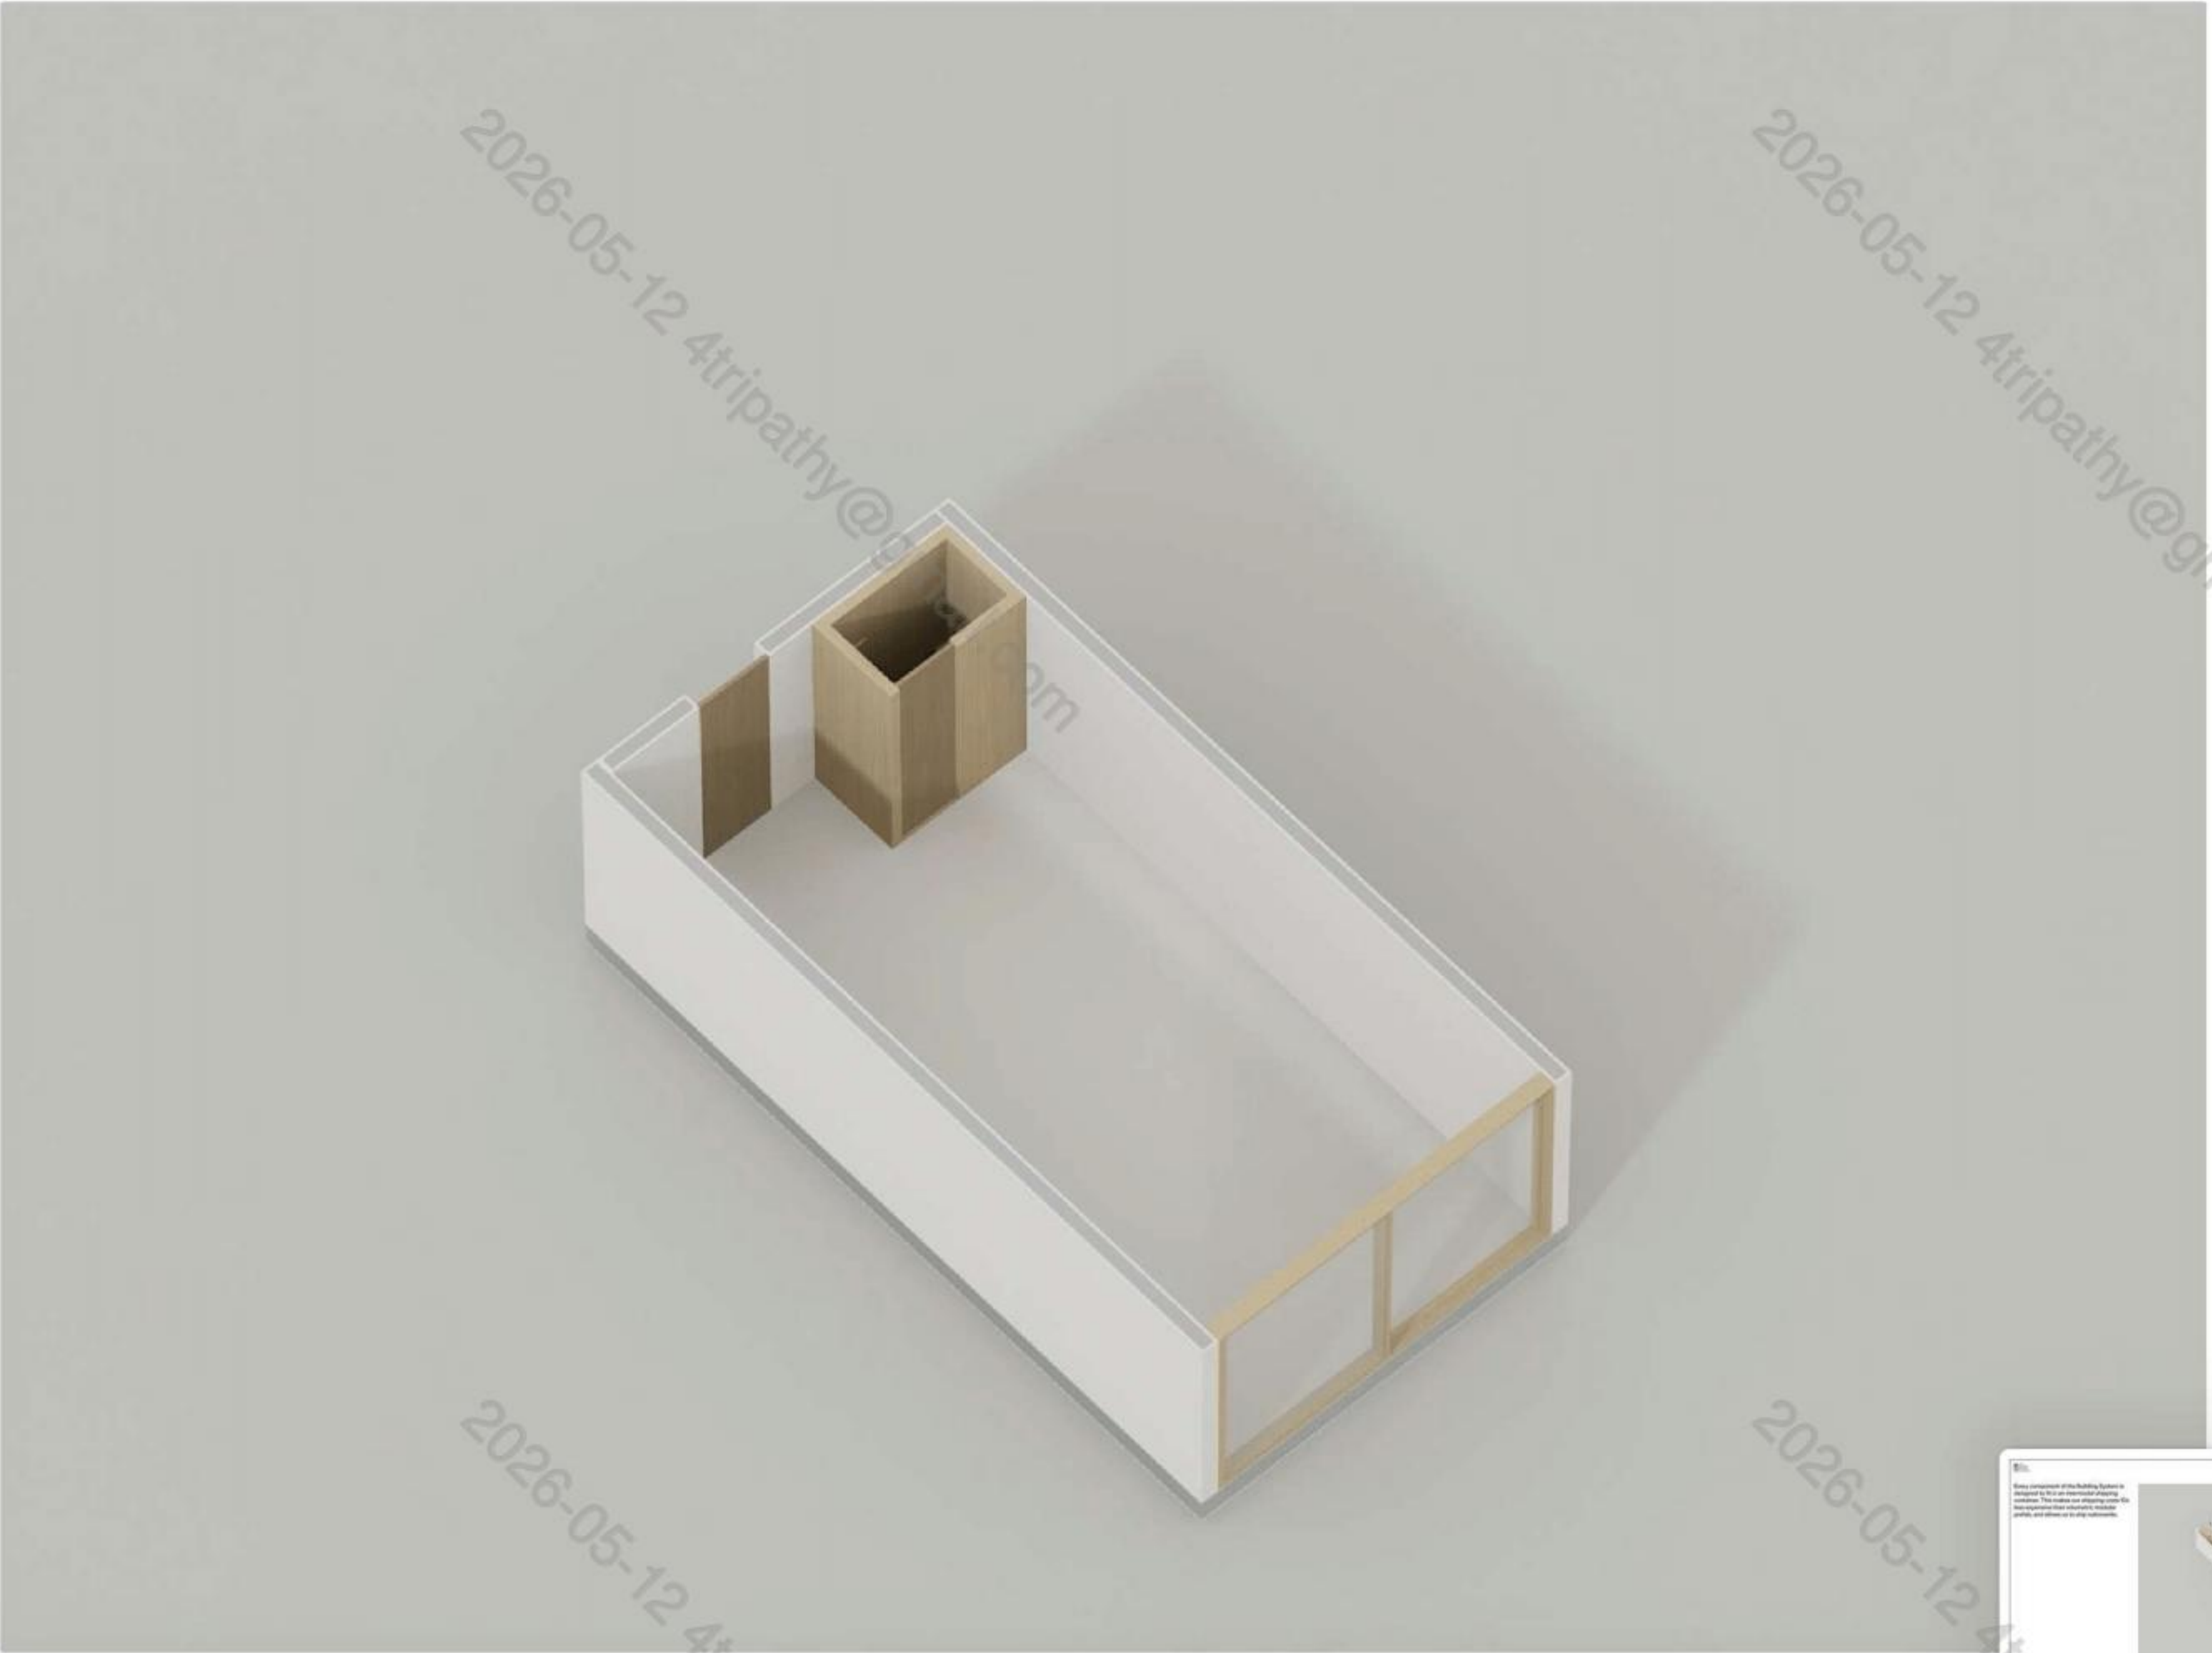

Rather than using standard construction methods and materials, we've opted to use materials meant for industrial manufacturing like steel and composites.

Every component of the Building System is designed to fit in an intermodal shipping container. This makes our shipping costs 10x less expensive than volumetric modular prefab, and allows us to ship nationwide.

Once the components arrive onsite, they're assembled by crane into finished rowhomes in less than a month.

These components can be combined in a near-infinite number of ways to build rowhomes and other missing-middle housing typologies of various sizes and styles.

From underwriting and site planning to factory production and onsite assembly, every step of the real estate development and production process is managed within Alamo, our internal software platform.

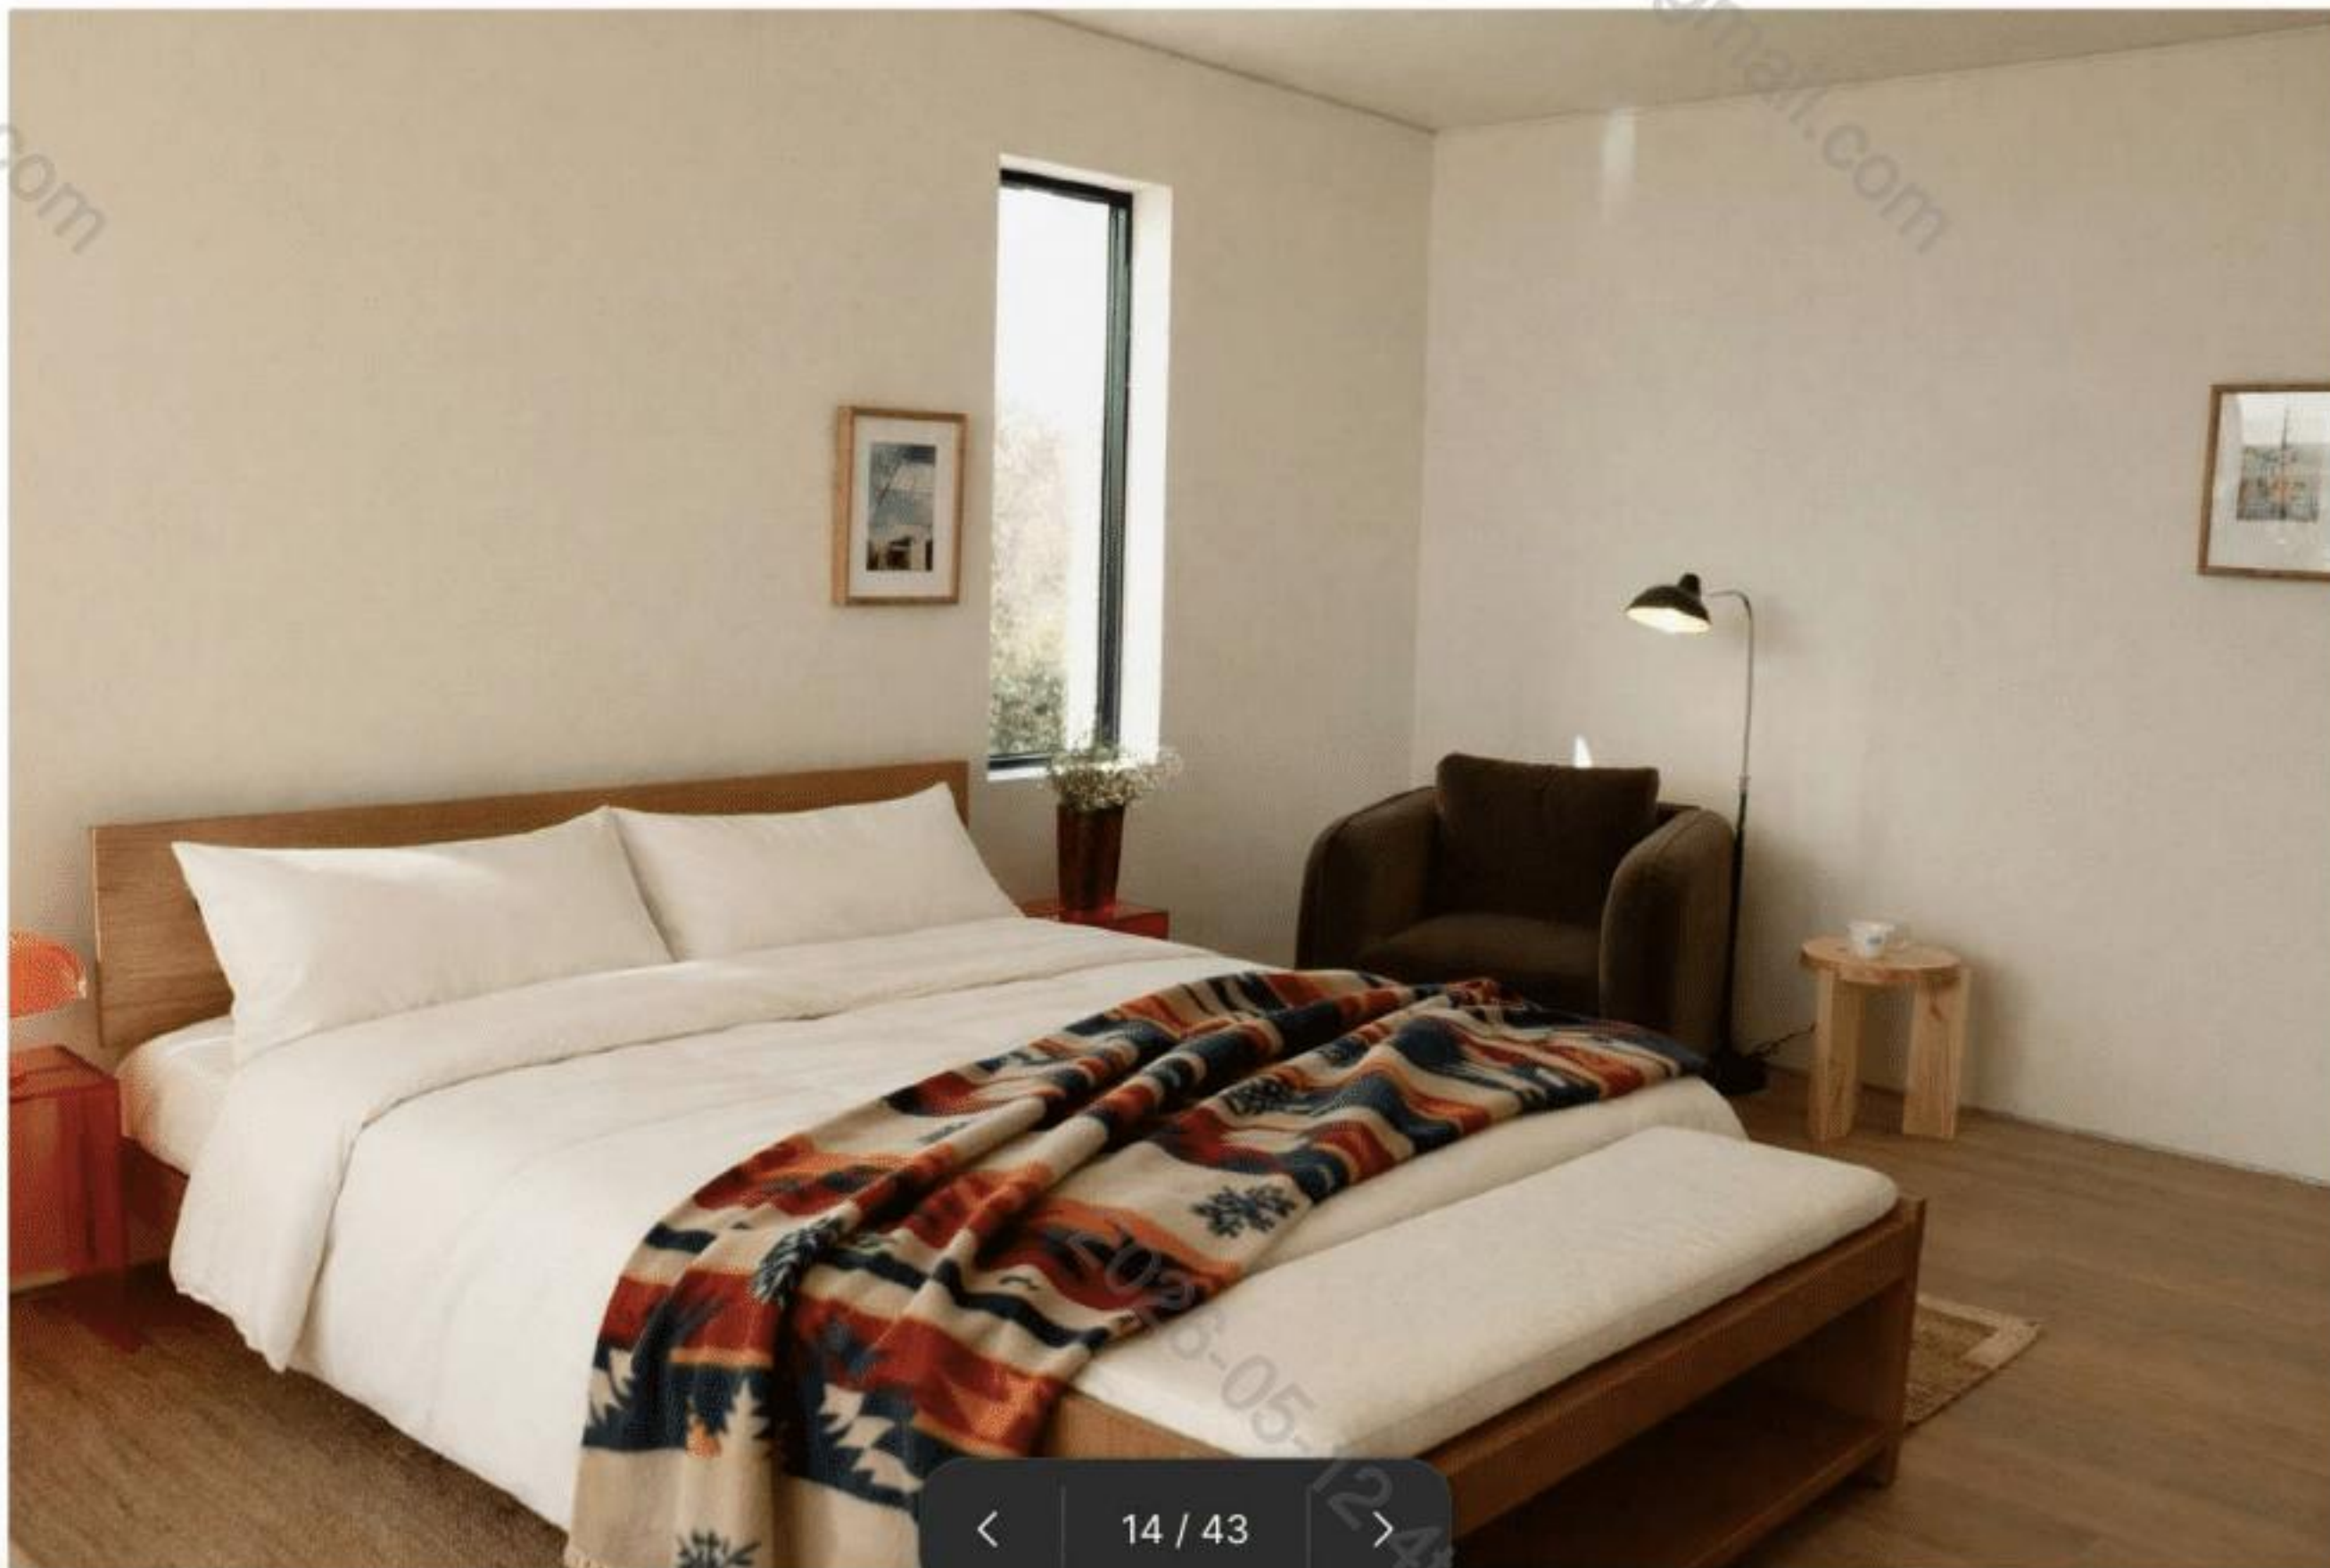

This year, we completed the first home using this system.

1800 sq ft
\$230 / sq ft
4 Bedrooms
2.5 Bathrooms
8 Weeks Manufacturing
3 Weeks Install
2 Weeks Finish out

2026-27 Project Pipeline

1

Austin, TX

3-unit rowhome project.

2

New Mexico

50+ rowhomes across projects in Albuquerque and Los Alamos.

3

Bozeman, MT

30+ rowhomes in new-urbanist community.

4

Austin Fund

Land debt fund for 2027 projects.

5

[Redacted]

500+ rowhomes per year in a new city.

The American Housing Corporation is a vertically-integrated homebuilder with an OpCo-PropCo structure.

How the Business Works

1

PropCo raises real estate capital

A mix of real estate debt and equity is raised to finance land acquisition and construction.

2

PropCo buys land and pays OpCo to build housing

After land is acquired, housing components are manufactured offsite and assembled onsite.

This is when the OpCo (venture-backed entity) makes money.

3

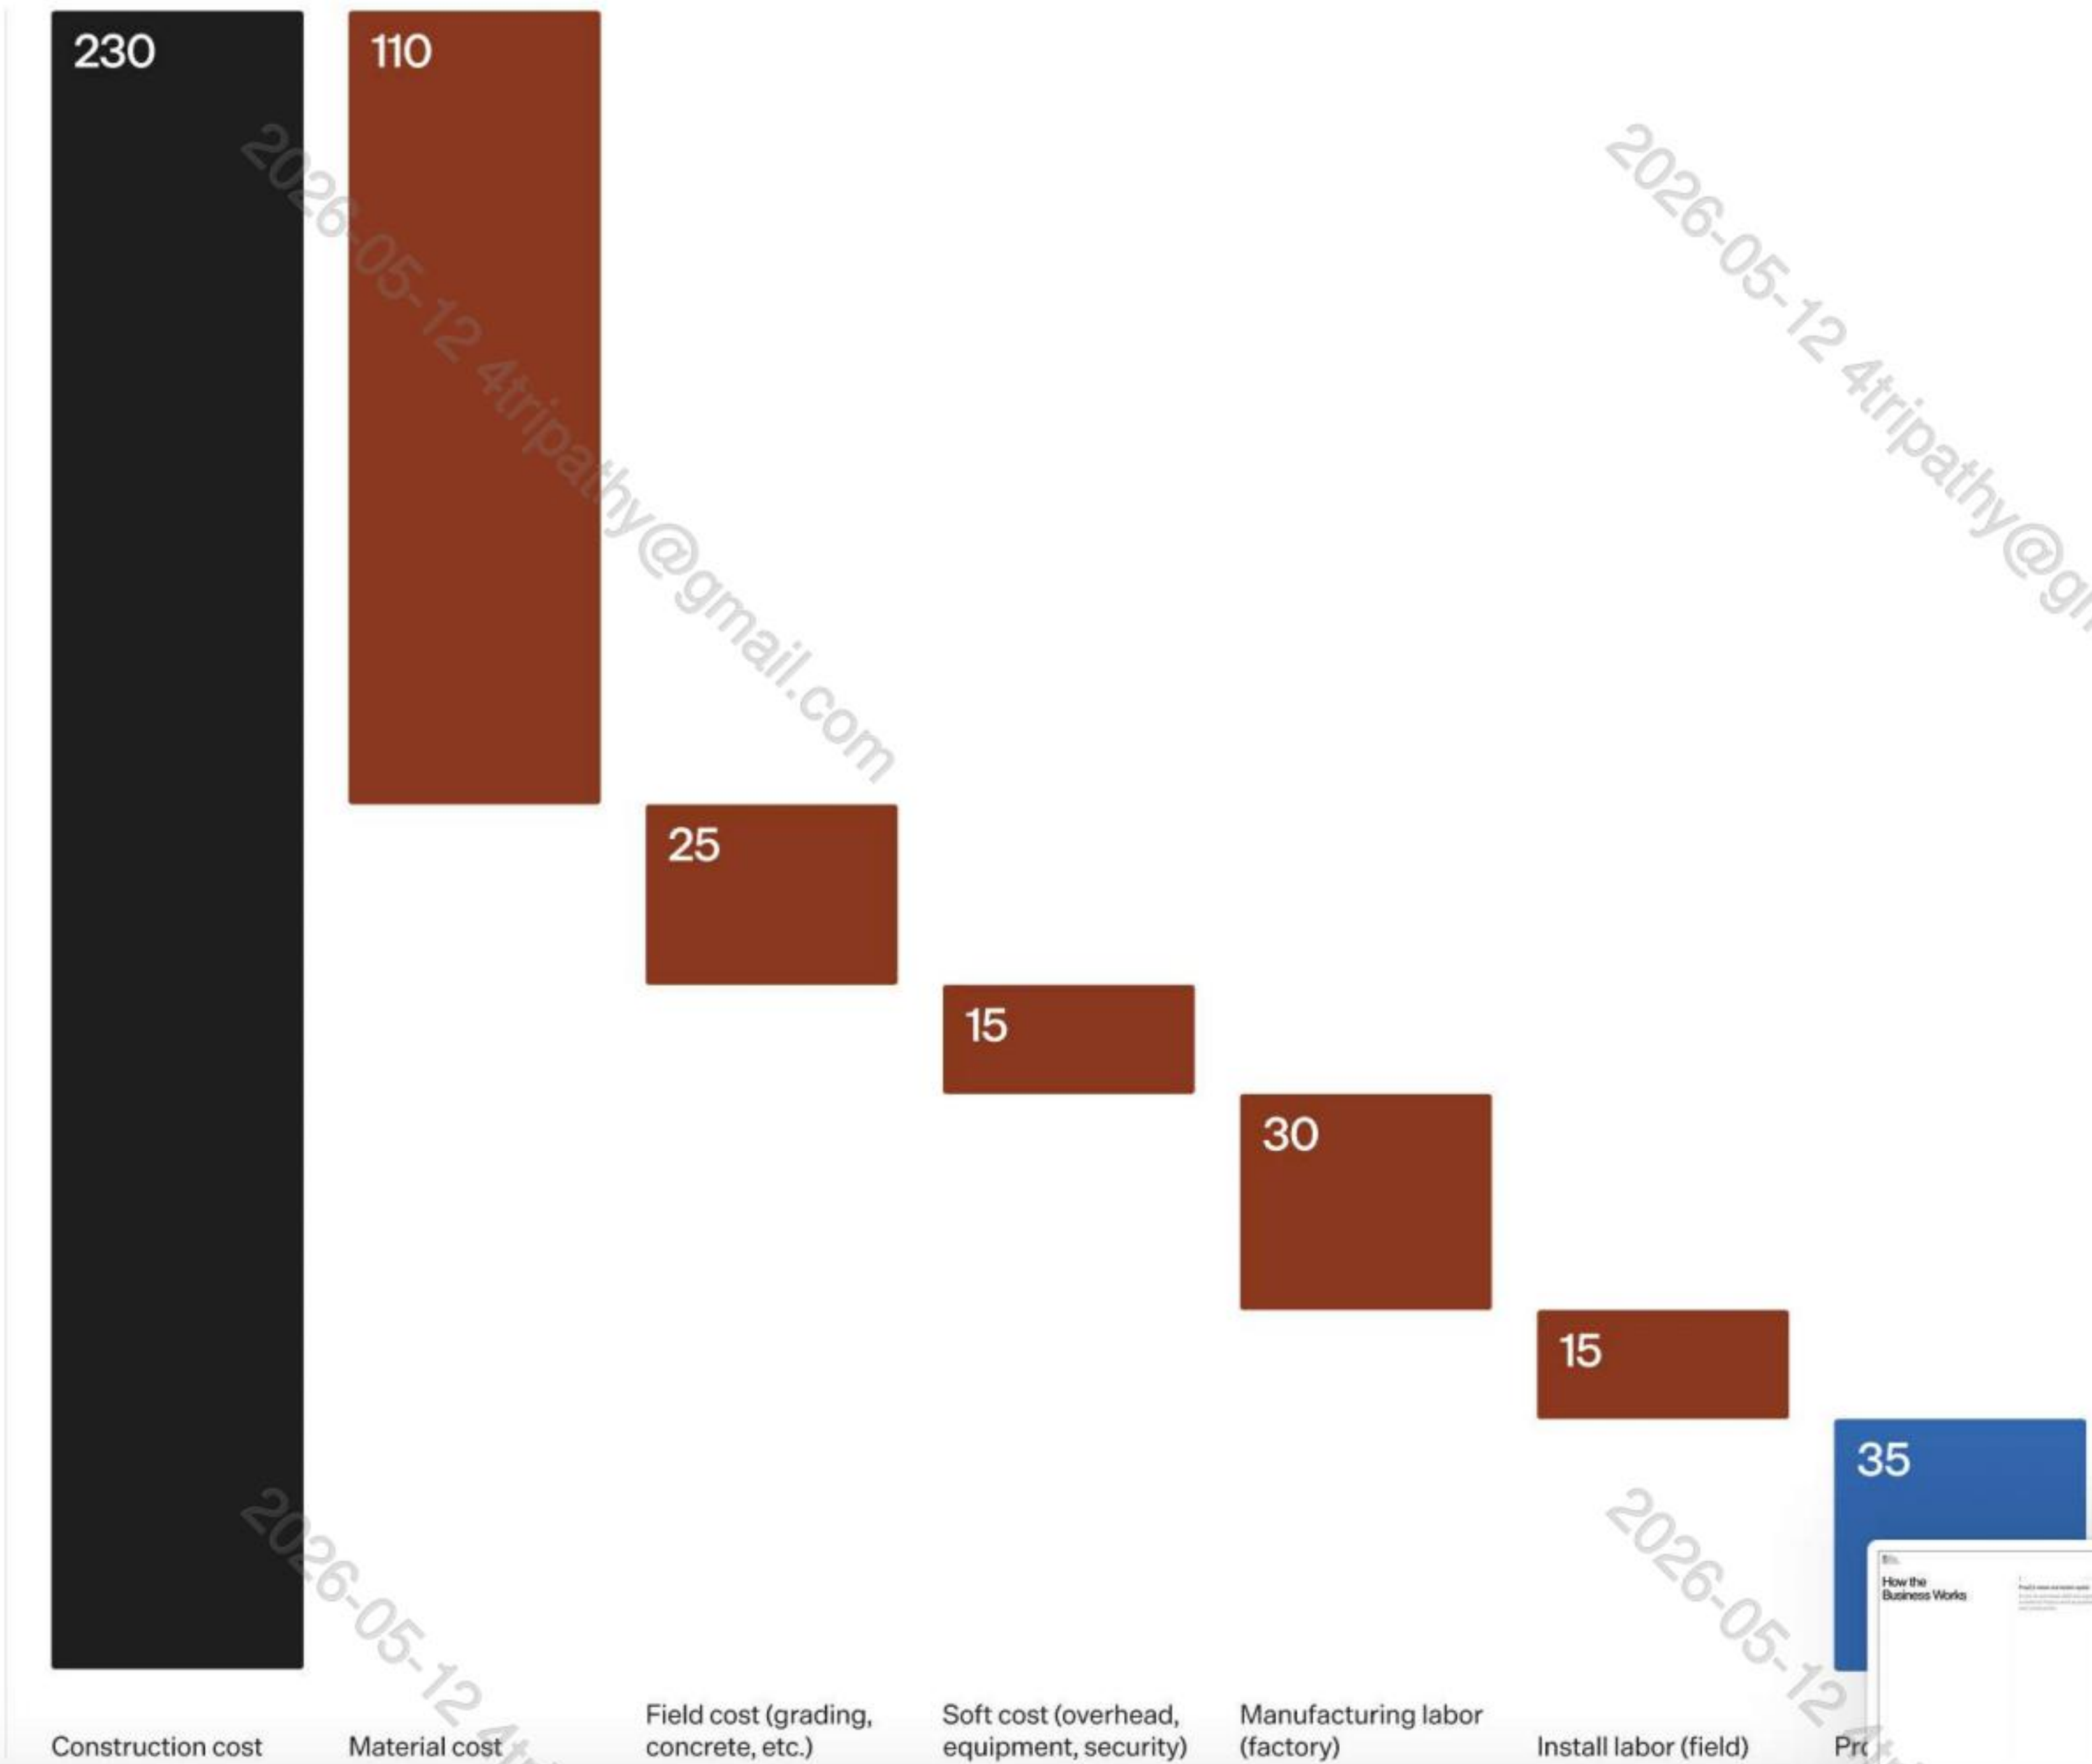

PropCo sells or rents housing

Once complete, homes are sold or rented to customers.

Current unit economics

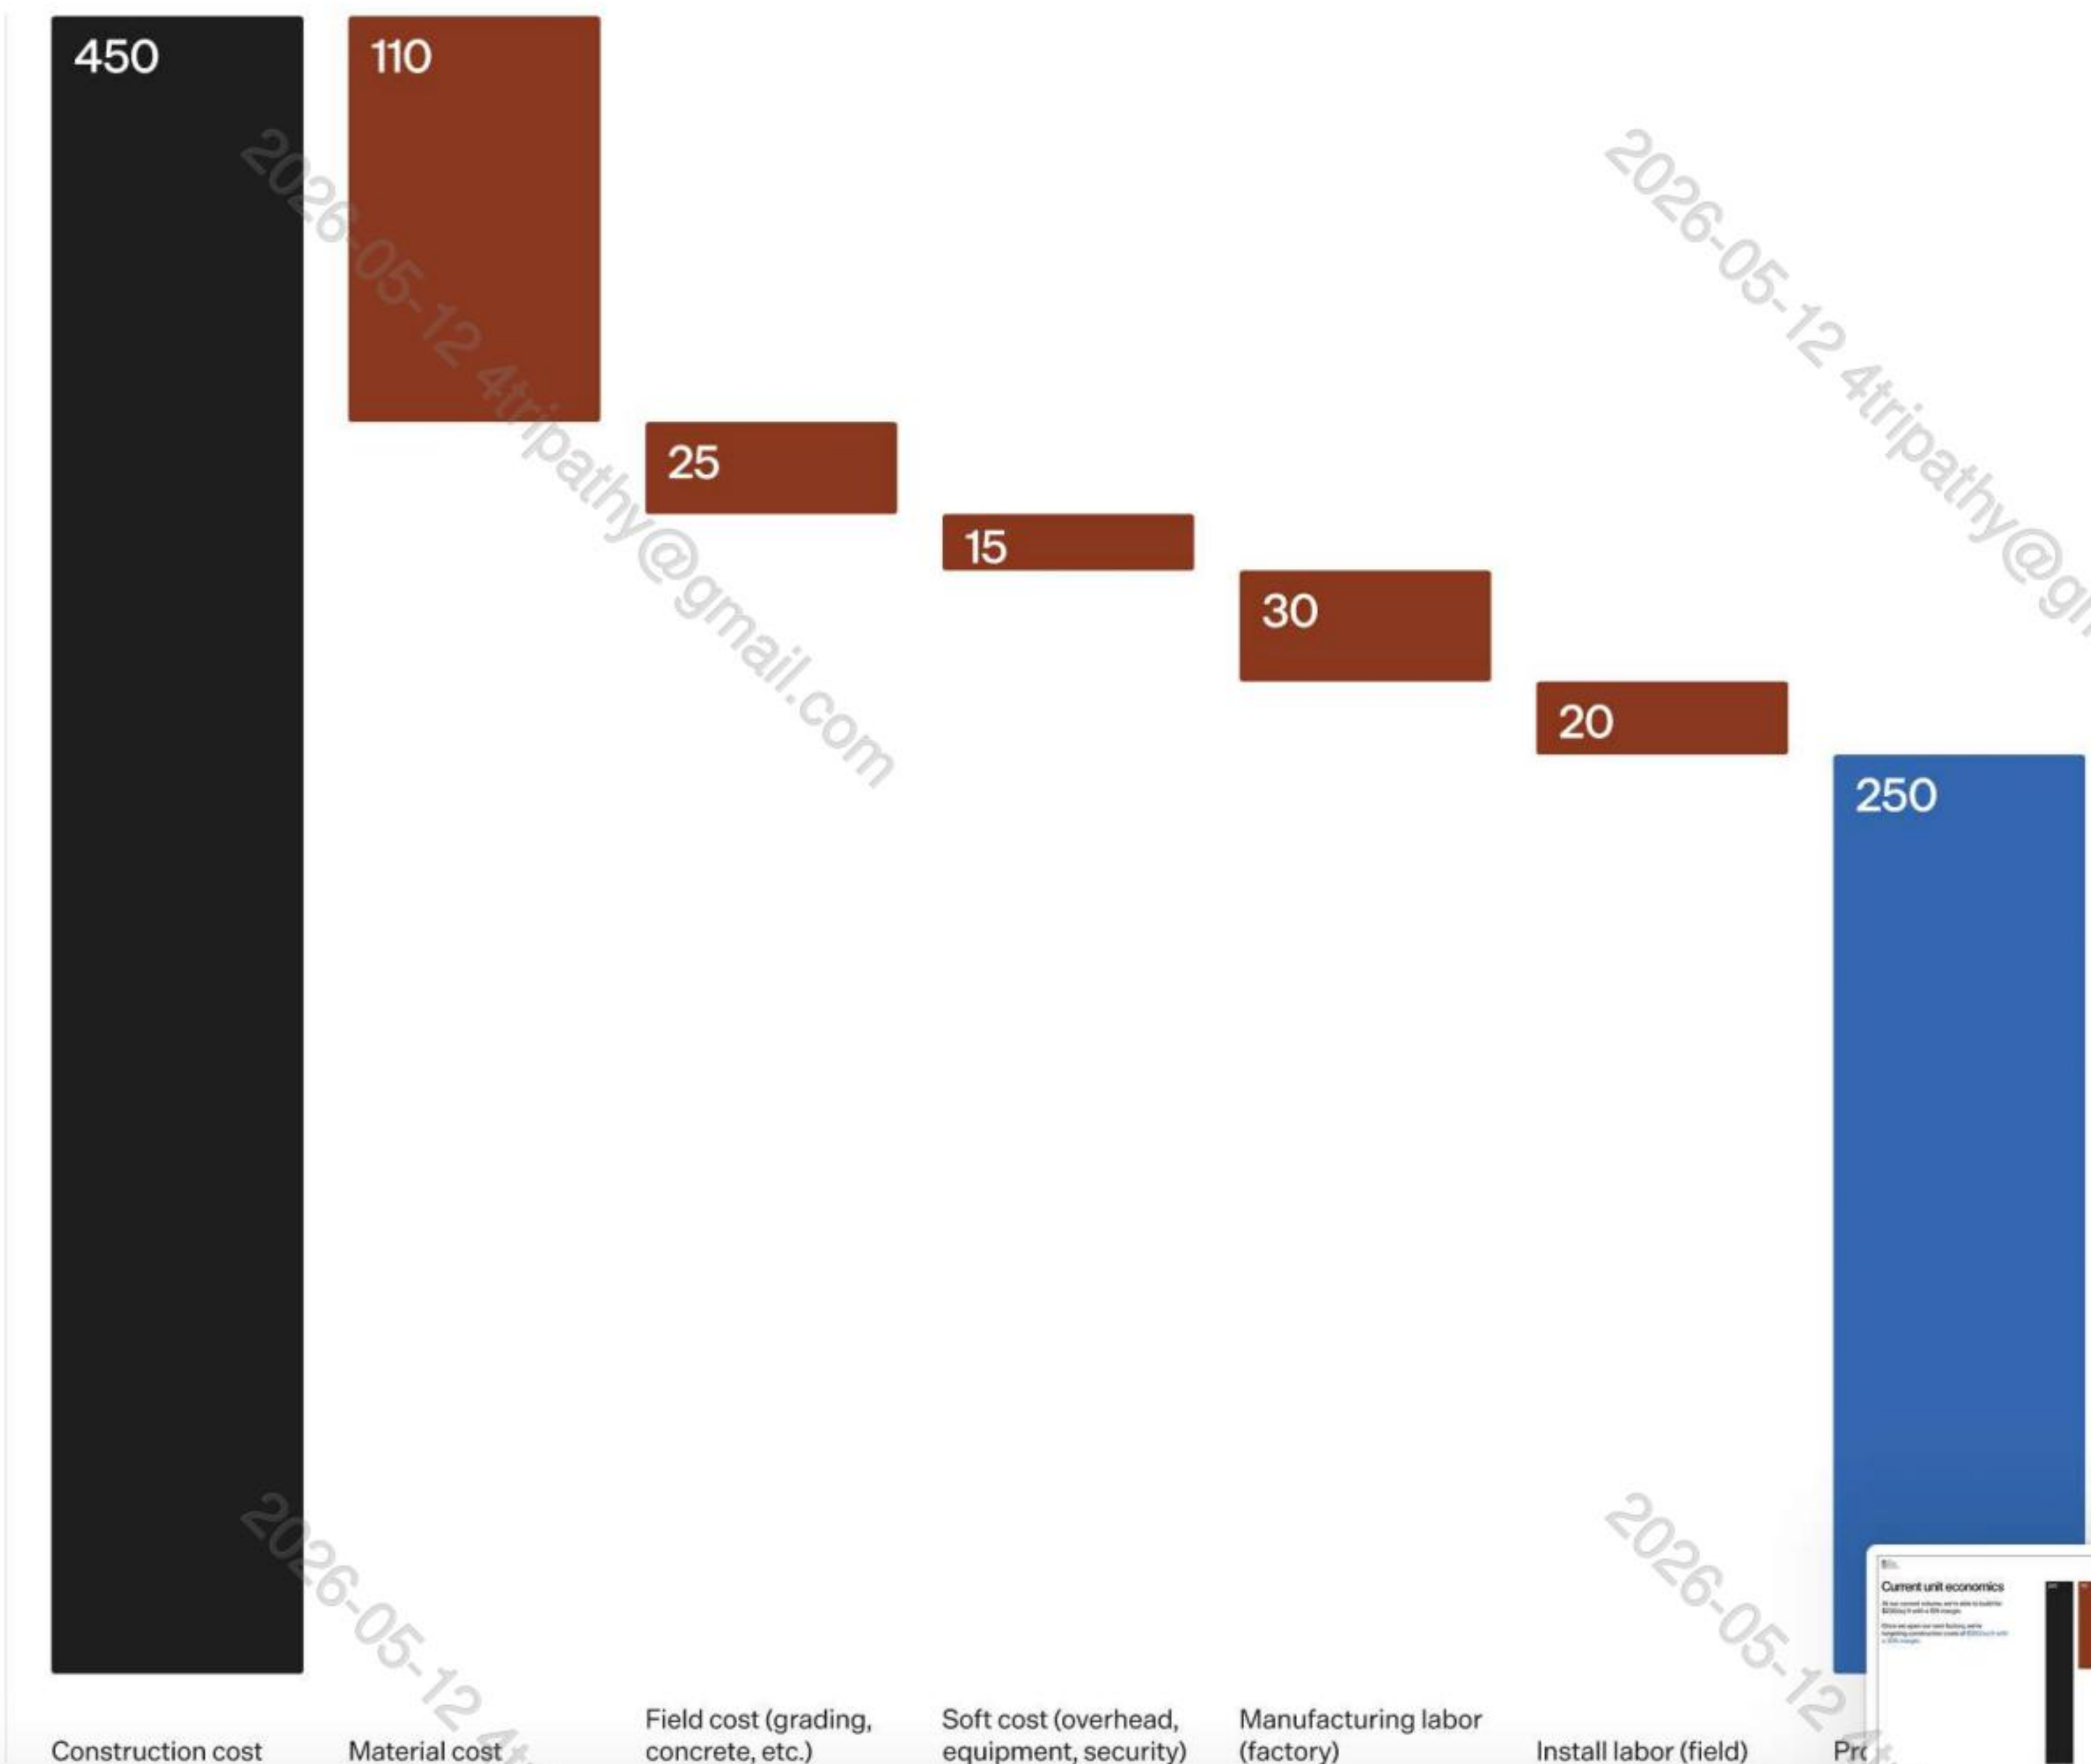

At our current volume, we're able to build for \$230/sq ft with a 15% margin.

Once we open our next factory, we're targeting construction costs of \$180/sq ft with a 30% margin.

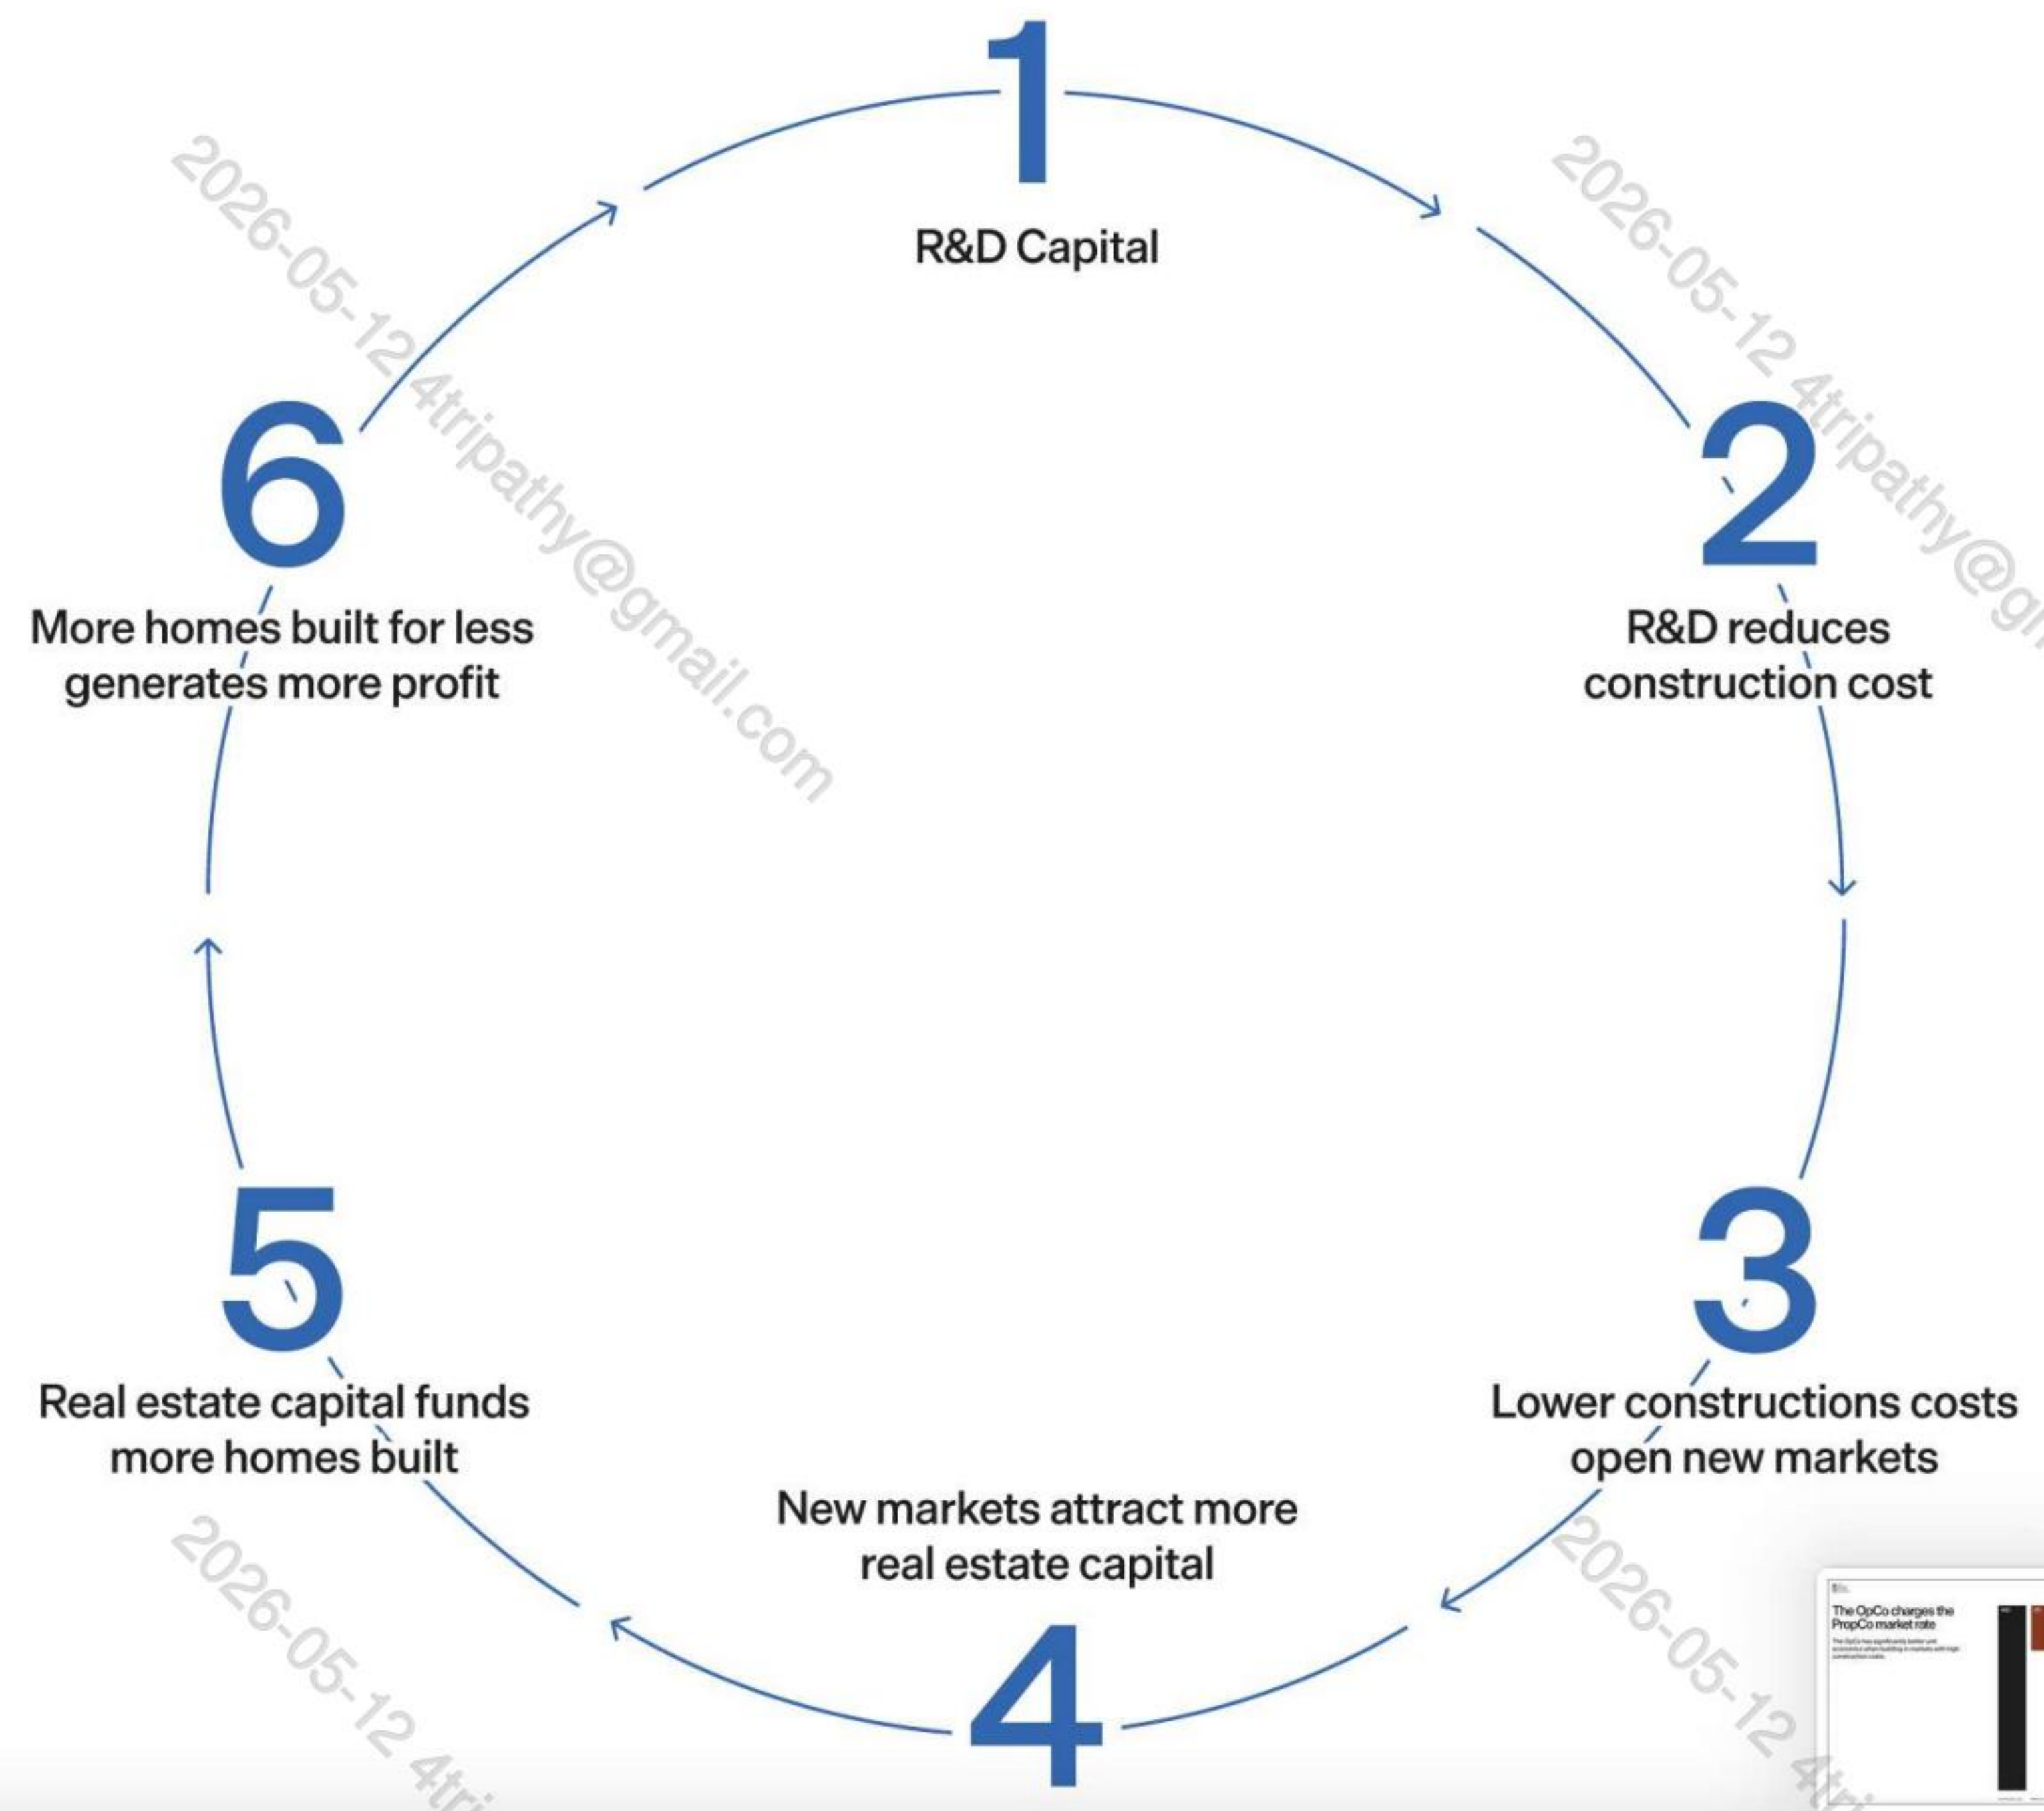

The OpCo charges the PropCo market rate

The OpCo has significantly better unit economics when building in markets with high construction costs.

How the Business Scales

Our company is a vehicle through which real estate capital is deployed. The amount of real estate capital we can raise is directly tied to our construction costs and production capacity.

Real estate capital sources

Phase I 2026-2027

SPV

Initiatives

- Debt Fund for land
- Deal-by-deal SPV for construction

Goals

- Generate market rate returns for RE investors & prove model

Phase II 2028+

Equity Fund & BTR JV

Initiatives

- Real estate equity fund for construction
- JV with groups like Blackstone, Bain Capital for build-to-rent (BTR)

Goals

- Decrease cost of capital for construction
- Introduce for-rent products

Phase III Future

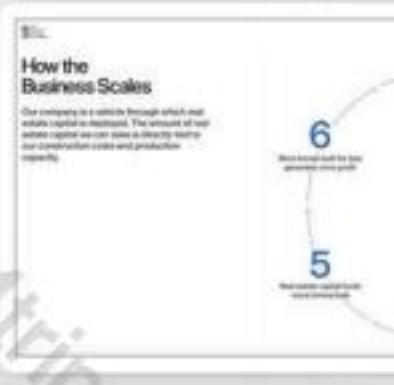

Permanent Fund

Initiatives

- Permanent Real Estate Fund for all phases of development

Goals

- Increase income and control for American Housing

Last 6 Months

2025 Q2

Building System designed

2025 Q3

Minimum viable factory built

2025 Q4

Demo home components manufactured

2026 Q1

Demo home assembled

Our biggest bottleneck is production capacity.

We have over 1,000 homes in the pipeline and a factory that can only produce 36 homes per year.

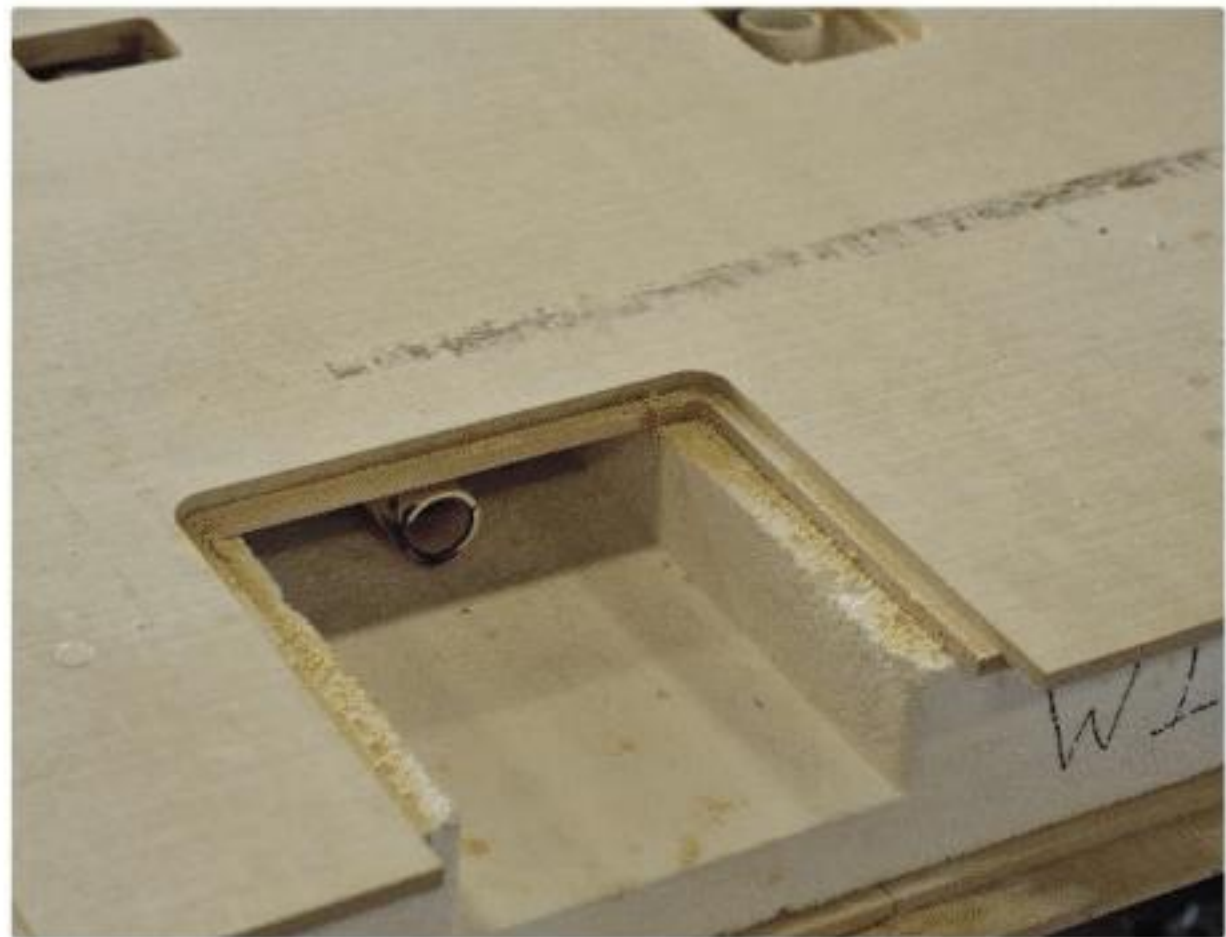

We're raising \$50M in Series A financing to build Factory 1 in Austin, TX.

Factory 1 will have a production capacity of 1,000 homes/yr.

Next 12 months

Q1

Building System certification

Q2

Factory certification

Q3

First homes sold to customers

Q4

Factory 1 complete

We're raising \$50M in Series A financing to build Factory 1 in Austin, TX. Factory 1 will have a production capacity of 1,000 homes/yr.

Product roadmap

Phase I Missing-middle

Housing types

- Rowhomes
- Small multiplexes (eg Boston triple deckers)

Property types

- Urban infill
- Suburban infill
- High-density greenfield

Target construction cost

\$180/sq ft

Phase II Apartments

Housing types

- Single stair apartments
- 5-over-1 apartments

Property types

- Urban infill
- Suburban infill
- High-density greenfield

Target construction cost

\$150/sq ft

Phase III Single family

Housing types

- Detached single family homes of all sizes

Property types

- Greenfield

Target construction cost

< \$100/sq ft

5 year roadmap

2025

Demo build

Build MVP factory for our building system

Build demo house

\$5M R&D capital requirement

2026

Factory 1 (Semi-Automated)

Build semi-automated factory w 1,000 unit/yr capacity

Build and sell 5-10 rowhomes

\$2.5M-\$5M in revenue

\$50M R&D capital requirement

2027

Expand to new markets

First real estate equity funds

Build 100-150 housing units

\$64M-\$94M in revenue

2028

Develop Building System v2

First institutional joint ventures

Begin development of Building System v2

~\$100M R&D capital requirement

2029

Next Generation Building System (\$100/sq ft)

Build Factory 2 - capable of 10x the output of Factory 1

~\$500M R&D capital requirement
