

SignalOS Consolidated Book — Full Diligence & Analyst Report

Compiled 2026-06-26 from the live watch dicts + per-name DDs. READ-ONLY. To be reviewed by SignalOS (rigor) + a skeptic (disconfirmation).

A. HELD POSITIONS (actual IBKR)

- **BAH** (Booz Allen), **CAI** (Caci-?/holding), **J** (Jacobs) — legacy holdings, not part of the thesis work.
- **SLS** (SELLAS) — 500 shares @ \$8.15 basis + SHORT 5x Jul-17-26 \$10 covered calls (sold \$1.18). Thesis: monetize-and-de-risk a +207%-YTD meme-biotech BEFORE the REGAL binary (which can't resolve in the option's life); ride to assignment at \$10 (=+37%), keep premium. No action.

B. PEPTIDE CORE

- **STVN** Stevanato — entry 13.5-15.5; demand de-risked (Lilly-anchored 93% via whale-ID); waiting on price + Fishers/Latina margin inflection. Currently ABOVE band.
- **EOLS** Evolus — accumulate <\$6 (Oct \$7.5 put->~\$6 basis); Jeuveau turnaround; Section-232 Korea tariff durable drag (onshoring INVERTS), no pre-buy stockpile yet (Census air-import); Q2 10-Q ~Aug 5.
- **LFMD** LifeMD — wait \$3.0-3.5; NOT a HIMS margin-trap (GM 84->88%); unproven turn; Q2 ~Aug 5 swing; RexMD web-traffic tell -37%/mo = wait.

C. AESTHETICS SLEEVE

rank ESTA>GALD>EOLS>Hugel>LFMD>INMD

Name	ccy	Verdict	Entry	FV (bear/base/bull)	Catalyst
ESTA	\$	WAIT	74-70	58/92/120	2026-08-05 Q2 earnings (FCF inflection); buy low-\$70s, add <\$70.
GALD	CHF	WAIT	145-130	120/178/225	2026-08 H1-26 results; buy only on pullback to CHF 130-145.
HUGEL	KRW	EVENT-GATED	220000-200000	180000/300000/430000	control-auction RESET OUT: fresh Jun-19-2026 refi (KRW765B, matures Jun-17-2029) = 'hold, not sell'. Base case sale H1-2
INMD	\$	EVENT-GATED	13-12	11/16.2/18.5	2026-06-15 MBO vote; standalone-value add only <\$13.

- **ESTA** — highest-growth body/implant pure-play; refi RESOLVED to 2031; FCF+ H2-26. GLP-1-body = narrative (co. lists as RISK).
- regime: DISCOVERING (SI 13% = squeeze-fuel, do-NOT-short)
- **GALD** — highest-quality GLP-1-face owner (Sculptra biostimulator); ~37x 26E EBITDA = fully priced; demand air-pocket.
- regime: DISCOVERED_CROWDED
- **HUGEL** — 47%-margin net-cash toxin franchise (rivals GALD quality); weak stock = JUSTIFIED discount (CBC/Aphrodite ~43% control-auction overhang + Korea-discount), NOT undiscovered. China growing, US ITC tail de-risked.
- regime: DISCOVERED / discount-justified (foreign-crowding workaround: foreign-OWN 41%, marginal flow = foreign SELLING)
- **INMD** — CEO-led \$16.20 take-private (Jun-15 vote); ~\$8.4/sh cash; conflicted take-under + class action + ITC. GLP-1-body UNVERIFIABLE.
- regime: MBO-arb (take-under)

D. WELLNESS SLEEVE

rank INSP>WST>PGNY>PRCT>BRBR>HIMS>VERU

Name	ccy	Verdict	Entry	FV (bear/base/bull)	Catalyst
INSP	\$	WAIT	42-38	30/60/95	Sept-2026 AMA CPT panel = THE binary (Cat-I code -> Jan-2028 re-rate); Q2 ~Aug = guided max-pain trough.
WST	\$	WAIT	290-255	249/320/432	Q2 ~Jul-23 beat-and-raise (P0.97, re-rate-confirm)
PGNY	\$	WAIT	23-20	18/28/40	2026 selling-season client adds (Sep-Nov) = re-rate event; Q2 print ~Aug = utilization tell.
PRCT	\$	WAIT	19-17	12/24/42	Q2-2026 print ~late-Jul/Aug (procedures-per-system re-accel = re-rate) + Q4-2026 EBITDA inflection (~55% odds, removes 2
BRBR	\$	SHOW-ME	9.0-7.5	6/12.5/21	Q3 FY26 ~Aug-4-6 (P0.97 down-skew): price/mix narrowing toward -5% + Adj-GM inflecting = repair -> \$7.50-9 pays; another
HIMS	\$	SHOW-ME	22-18	15/26/42	Q2 ~early-Aug (first full qtr under WL restructuring, decisive). OWNABLE only <=\$22 AND 2 quarters US (not-M&A) re-accel
VERU	\$	BINARY	2.4-1.8	0.6/2.8/7.0	PLATEAU 34-wk interim ~Q1-2027 (NCT07446998); P(pos)~0.65; dilutive raise likely around it. Accumulate ONLY \$1.80-2.40 (

- **INSP** — sleep-apnea hypoglossal neurostim; 2025 collapse = lost Medicare CPT code (NOT GLP-1); GLP-1 net-EXPANDS dx funnel; Inspire V margin-accretive (86.5% GM). Bear time-boxed ~18mo.

- regime: dislocation, event-gated (-53% YTD; ~\$400M net-cash floor; short FADING 12.7% not building)
- **WST** — most VERIFIABLE GLP-1 tailwind — HVP ~60% of sales, destocking OVER (Q1 +15% organic, RAISED FY26), regulatory re-filing moat. Real tail = ORAL-GLP-1 (orforglipron) compresses the multiple YEARS before volumes fall. Undisclosed whale 15.8% (Novo/Lilly).
- regime: quality-compounder at RECOVERY TOP (40x fwd, ~1.6% under 52wk high; round-tripped the 2025 destocking crash)
- **PGNY** — category-leader fertility benefits; feared Alphabet client-loss ALREADY happened & absorbed (+10% FY25 through it); ~\$310M cash no debt, ~9% shares retired/6mo; low-teens EPS compounder. Utilization = the open risk.
- regime: quality-compounder, CLEAN, debt-free; macro-beta = tech employment; NOT undiscovered (~21x GAAP/13x adj, fair)
- **PRCT** — men's-health BPH Aquablation robot; cheap after 6 analyst cuts BUT utilization-per-system DECLINING + flat US BPH market = cyclical(self-inflicted realignment) vs structural(saturation) coin-flip. EAU/AUA guideline upgrades already fired, didn't stop the de-rate.
- regime: de-rated unprofitable MedTech (-65% from high, ~2.5x EV/sales); high-beta, capex-cyclical
- **BRBR** — GLP-1 IS demand-helpful (RTD volume +11.7%) but can't convert to margin: Adj-GM 34.5%→22.7%, price-mix -9% (buying volume w/ promos), FY26 EBITDA guide CUT ~28%. Real bear = protein-RTD commoditization + 74% customer concty (Walmart/Costco/Amazon) + leverage. Short right for the wrong reason.
- regime: broken compounder (-81%/12mo; \$1.3B stub NOT \$8B; IV ~99%); show-me turnaround, leveraged ~3.5x
- **HIMS** — best franchise but the bear is already in the Q1 10-Q: growth +111%→+3.8%, US rev DECLINED -8.4% (all 'growth' = ZAVA M&A), GM 73→65%. GLP-1 compounding cliff HERE (FDA named Hims; \$33.5M WL restructuring); Novo terminated+sued (dismissed w/o prejudice = refile risk)+securities suits; founder 175-vote/sh control. Premium vs LFMD NOT justified — do NOT pair.
- regime: DISCOVERED_CROWDED (-55% from high; crowded-long); NOT ownable on price alone
- **VERU** — enobosarm preserves lean mass on GLP-1 (best SARM muscle data in 15yr, honestly disclosed) BUT Oct-2025 raise layered \$3.00 warrant wall (as-conv ~41.8M ~2.6x) capping upside; cash \$27.6M ~3.7q runway. FDA endpoint = incremental weight loss, NOT 'muscle preservation'.
- regime: SCIENCE-OK / STRUCTURE-TRAP; single-asset binary; twice-burned (COVID/sabizabulin), NOT undiscovered

E. COSMECEUTICAL SLEEVE

rank LRLCY>BEI.DE>ELF>CRDA>ODD

Name	ccy	Verdict	Entry	FV (bear/base/bull)	Catalyst
BEI.DE	EUR	WAIT	72-66	60/79/100	H1-2026 ~Aug-6; re-rate trigger = NIVEA W-Europe monthly market-share INFLECTION (Derma already believed). BUY-SMALL the
ELF	\$	WAIT	55-48	40/68/105	Q1 FY27 ~Aug (first clean organic-vs-acq split, swing); Rhode->Sephora Europe 19-mkt Sept = re-rate trigger. Accumulate
CRDA	GBp	WAIT	2900-2700	2400/3375/4200	H1-2026 28-Jul; real re-rate = >20% group-margin target by FY2028 (~6% EPS/100bp). Accumulate on weakness 2700-2900p.
ODD	\$	SHOW-ME	11-9	7/14.5/28	Q2-2026 ~early-Aug = THE trigger (CPA rollback toward ~2.0 = re-rate; stays ~2.8/another cut = de-rate). Asymmetry attra
LRLCY	EUR	WAIT	375-350	310/400/455	WAIT for a pullback — start EUR350-375, real own-now only on a EUR320 dislocation; do NOT pay 28x at spot ~388. Downside

- **BEI.DE** — NOT the durable compounder LRLCY is — it's a TURNAROUND: the GROUP is SHRINKING (organic -4.6% Q1-26), NIVEA 56% losing W-Europe share, La Prairie -15%. Derma (Eucerin/Aquaphor +11.7% on PATENTED Thiamidol) is a real moat but only 15% & can't offset. Own-now case = CHEAP + FLOORED (decade low, ~EUR4B net cash floor at bear EUR60), NOT 'fair value of a compounder'. Re-rate gated on the UNPROVEN NIVEA inflection.
- regime: de-rated quality dislocation (-45% from peak, decade low; net-cash ~EUR4B; maxingvest 52% controlled; FOREIGN positioning-blind — trade XETRA EUR, the 'BEISY' ADR is DEAD/use BDRFY=untradeable)
- **ELF** — cleanest QUANTIFIED skinification (skincare 9->23% of mix); Rhode acq \$390M +80% at cheap 2.3x, Naturium 2x. Tariff bear WEAKER than consensus (SCOTUS voided IEEPA-reciprocal Feb-26; only 25% Sec-301 structural; price raises -> Q4 GM +140bps). BUT decel confirmed (FY27 +12-14% vs FY26 +25%, core color +4%).
- regime: real thesis, fair-not-cheap (~2.8x sales, ~20x adj-P/E; net DEBT ~\$552M; runs near GAAP breakeven mid-Rhode-integration); US-liquid = most actionable of the sleeve
- **CRDA** — 'purest cosmetic-actives shovel' label REFUTED — Beauty Actives is ~15-20% of group (~1/6); rest cyclical (Industrial -4.6%, Life Sciences destock + COVID-lipid unwind, GBP44.6M impair). De-rate from the 2021 lipid-bubble is earnings-driven & CORRECT. Fairly priced — not a trap, not a bargain.
- regime: quality-cyclical chemical (NOT a structural-skincare pure-play); positioning-blind — trade LSE GBP (COIHY ADR unusable)
- **ODD** — Oddity Labs IS real (Revela acq, Boston lab ~45 staff, 8 owned-molecule products to mkt 2026) but \$0 of FY25 rev depended on it = option not yet moat. Bear PRINTED Feb-26: Meta algo change spiked CPA 1.5->2.8, withdrew guidance, Q1-26 rev -26%, first net loss. First-party data doesn't insulate top-of-funnel CAC.

- regime: speculative turnaround (-82% from high; econ mcap ~\$813M, EV ~\$696M ~0.86x sales, \$550M convert); platform-dependency repriced
- **LRLCY** — OWNS the derm moat (CeraVe/La Roche-Posay/SkinCeuticals/Vichy: +5.5% LFL, 26.1% margin, 3 brands >EUR1B); GALD derm air-pocket didn't reach it (dermo-cosmetics, not injectables); raised Galderma stake to 20% = aesthetics call-option. BUT it's a low-mid-single-digit grower at a premium multiple — quality-compounder/TINA case justifies a FAIR multiple, NOT paying up for slowing growth. Same bucket as GALD/PGNY: quality at full price, wait for the dip.
- regime: highest-QUALITY but FAIR-NOT-CHEAP (own-now WALKED BACK 2026-06-26): ~28x fwd for only MID-SINGLE-DIGIT organic (~5-6% LFL) = ~5x PEG, reported rev ~FLAT (FX drag); '5% below its own 30-40x history' is a relative crutch (that band was a low-rate artifact). Best-in-class (20% op margin/18% ROE/near-unlevered/EUR7.2B FCF) but thin MoS; thesis leans on the multiple HOLDING. Trade Paris EUR (LRLCY ADR unsponsored)

F. K-BEAUTY SUB-SLEEVE

rank COSMECCA>COSMAX>SILICON2

Name	ccy	Verdict	Entry	FV (bear/base/bull)	Catalyst
COSMECCA	KRW	ACCUM<62.9k	62900-54000	40000/67000/110000	NOT a buy at 66.5k (prob-wtd EV ~+5%, -40% bear tail). Accumulate: starter <=62,900 / core 58-60k / add 52-54k; invalida
COSMAX	KRW	WAIT	135000-120000	110000/165000/230000	Q2 ~mid-Aug; re-rate ONLY when consolidated OP growth >= rev growth (deck stops 'leverage decreased'); P~0.30 at Q2, ~0.
SILICON2	KRW	AVOID	22000-18000	20000/32000/54000	2Q26 ~Aug-7 DECISIVE: de-rate if YoY<30% / OM<17% -> 2nd leg to 20-24k; re-rate only if YoY re-accel >45% + Europe infle

- **COSMECCA** — FULL DD (6 work-streams): CLEAN business (unqualified audit, RPT clean, top-5 cust<35% verified via openFDA whale-ID: Anua/BYOMA/Bass Pro/L'Oreal) at ROUGHLY FAIR VALUE — base FV revised 82k->67k (screen pulled the bull-yr EPS forward + applied a peer-PREMIUM multiple). Census HS3304 boom DECELERATING (2024 +54% -> 2025 +5.7% -> 2026 ~flat); the +56% is base-effect share-gain = fade it, underwrite 15-20%. Englewood/onshoring REAL but small/slow/low-margin (US-Totowa +12% 6%OM; the engine is its KOREA sub) = ~3-5% of FV option, not a pillar. Net debt + FY25 FCF NEGATIVE + governance (failed KOSPI uplisting on spousal co-CEO) cap it.
- regime: DISCOVERED (foreign-own 6%->22.7%) but flow read OK (foreigners still NET BUYING, marginal seller=domestic NPS, short book 0.21%=no bear); -38% = Feb parabola-

break + SECTOR ODM de-rate + LIVE macro crash, NOT company-specific; net DEBT ~120B (not net cash); KRX-direct

- **COSMAX** — scale-leader K-beauty ODM ~10x fwd / 0.68x sales BUT the margin-inflection thesis is REFUTED by Cosmax's OWN deck (OP leverage 'decreased' on mix/cost = STRUCTURAL, not fillable-capacity). China RECOVERING (+19.6%, turned profitable) so the drag is dated; US +46% but only ~6% of group. Consensus TP 248k ABOVE the bull case = Street priced for the leg the data refutes.
- regime: DISCOVERED crowded large-cap (foreign-own 38.3%, ROSE through the -47% year); cheap-for-EARNED-reasons (~2.9x liab/equity, neg working capital); 52w low
- **SILICON2** — K-beauty export AGGREGATOR but PARABOLA ROLLING OVER: growth 132->85->64->46->60->76->+41.1% (1Q26, lowest in 8q), converging to the import-flow run-rate the Census 1.13x predicted; margins compressing (OM 22.8->18.6%). 'Purest US beta' MIS-anchored (Europe #1 34%, NA #2 24%); thin-margin redistribution wholesaler (93%), disintermediation risk (Anua/BoJ/medicube sell direct on Amazon US).
- regime: momentum vehicle ALREADY rolling over (-53% from high; retail-driven ~8.6% foreign; 7 analysts BUY w/ TP +92% not yet cut = late-cycle estimates-follow-decel)

G. SMALL-CAP VALUE BASKET (thesis #1, deep-value->trap-filter->DD verified)

rank GCT>DFIN>EVER(half)>EPAM(starter)>SBH>BKE>CRCT

Name	ccy	Verdict	Entry	FV (bear/base/bull)	Catalyst
GCT	\$	HIGH	32-25	24/43/60	GM <22% for 2 quarters / auditor change off KPMG / organic (ex-acq) rev negative / Sec-232 furniture step-up effective J
DFIN	\$	HIGH	42-36	45/56/60	prolonged IPO/M&A deal-freeze (EBIT toward ~\$115M) / software mix stalls below 50% of profit / leverage rises on a debt-
EVER	\$	MED (HALF-SIZE)	23-18	25/38/41	the 40%-customer concentration footnote worsens / TRUE YoY revenue decline (distinct from the seasonal Q1 dip) = re-open
EPAM	\$	MED (STARTER <=\$80)	80-70	65/115/131	organic cc revenue turns negative / delivery headcount must keep FALLING to defend margin (= AI compressing billable hou
SBH	\$	MED-LOW	15-12	16/20/22	Sally (consumer) comps turn NEGATIVE / net-debt/EBITDA rises (de-lever reverses) / GM gains fade
BKE	\$	LOW (income-value)	43-38	40/49/52	comps turn NEGATIVE / transactions roll over (the anti-melt tell breaks) / regular dividend cut
CRCT	\$	LOW (income-value, thin)	4.4-4.1	3.22/5.2/7.72	paid-subscribers roll over QoQ / Platform (subscription) rev turns negative YoY / controller

Name	ccy	Verdict	Entry	FV (bear/base/bull)	Catalyst
					take-under proposal / recur

- **GCT** — net-cash(31% of mcap, 97% US/free) distributor+3PL mis-priced as China-fraud; 5.1x EV/EBIT, 15.5% FCFy, KPMG-audited/no-VIE; tariff PASS-THROUGH + SCOTUS struck IEEPA Feb-26; the honest catch = it's a 1P-distributor (29.8%-GM engine) not the 'asset-light marketplace' bulls sell; deserved discount = controlled-co (Wu 70.7% vote), NOT fraud. THE high-conviction find.
- KILL: GM <22% for 2 quarters / auditor change off KPMG / organic (ex-acq) rev negative / Sec-232 furniture step-up effective Jan-2027 / Founder-Undertaking lapse ~Aug-2027 + privatization chatter
- **DFIN** — software-transition compounder mis-priced as dying-print: SW now 47% rev/45% profit, +21% EBITDA; EBIT GROWS on declining rev (real mix-shift); the scary GAAP net-income drop was a 1-time non-cash pension settlement; 8.6x EV/EBIT, 10.5% FCFy, 1.4x lev, ~5%/yr buyback.
- KILL: prolonged IPO/M&A deal-freeze (EBIT toward ~\$115M) / software mix stalls below 50% of profit / leverage rises on a debt-funded deal
- **EVER** — online insurance lead-gen marketplace; cyclical-peak trap REFUTED — Q1 printed RECORD op-income + record 12.3% margin, still new-highs (the +132% was a trough base-effect, not a peak); net cash \$178M, zero debt. HALF-SIZE: ONE carrier = 40% of revenue + ~90% auto = concentration risk.
- KILL: the 40%-customer concentration footnote worsens / TRUE YoY revenue decline (distinct from the seasonal Q1 dip) = re-opens the cyclical-peak hypothesis
- **EPAM** — premium digital-product engineering at 6.2x EV/EBIT, net cash ~\$17/sh, 14.6% FCFy, de-rated -60% on AI-disruption + Ukraine-delivery fears. Geography DE-RISKED (India now #1 delivery); AI net-POSITIVE so far (\$125M AI rev, +Anthropic partnership). BUT organic growth low-single-digit + guide LOWERED; the AI-disruption SECULAR question is the open UNVERIFIABLE = starter only, not a conviction core.
- KILL: organic cc revenue turns negative / delivery headcount must keep FALLING to defend margin (= AI compressing billable hours, the bear winning) / a >10% client emerges then churns
- **SBH** — Sally Beauty Supply + CosmoProf pro-distribution; 'dying retail' REFUTED — consolidated comps +1.3%, Sally comps positive w/ traffic AND unit-retail up; net debt 1.7x & FALLING; +17% was stale, latest qtr ~+4% gross-margin-led (Fuel-for-Growth). Return = re-rate + ~6%/yr buyback + de-lever, NOT organic growth. Ties the beauty theme.
- KILL: Sally (consumer) comps turn NEGATIVE / net-debt/EBITDA rises (de-lever reverses) / GM gains fade
- **BKE** — net-cash (\$5.73/sh) 33%-ROIC mall apparel retailer; the MELT thesis REFUTED — comps +5.1%, transactions +2.6% (rising TRAFFIC), store count flat. BUT the +37% EBIT that surfaced it was a 1-time \$19.1M litigation settlement -> underlying EBIT DECLINED YoY (the growth signal is a trap). Income-value 'paid-to-wait': 3.2% covered regular div + variable special. Buy the cash-return, NOT the growth. 6.8-7.3x EV/EBIT ex-settlement.

- KILL: comps turn NEGATIVE / transactions roll over (the anti-melt tell breaks) / regular dividend cut
- **CRCT** — 89%-GM Cricut Access subscription annuity inside a declining-hardware shell; annuity GROWING but MATURING (penetration ~92%, net-adds halving, first sequential sub-decline); FCFy FLATTERED (14% headline -> ~7-9% normalized); income-value 'paid-to-wait' (4.4% div + buyback); Class-B = 5 votes -> 93% controlled = LOWBALL-take-under risk (not a premium). Accumulate-on-weakness, LIMITS.
- KILL: paid-subscribers roll over QoQ / Platform (subscription) rev turns negative YoY / controller take-under proposal / recurring capital-return cut while cash is retained (pre-take-private tell)
