

Per-Bond Due-Diligence Record

Before any order is staged, every bond in the sleeve is independently re-verified against primary sources — the MSRB regulatory record for tax status, legal pledge, call features and the live trade tape; OpenFIGI for issuer identity; the state's AB 1200 fiscal-stress rosters; and a from-scratch recomputation of the after-tax yield from raw coupon, price and maturity. This appendix is the complete record of that pass, run 2026-06-11 by independent verification agents (six bonds each), plus single-bond passes on each replacement candidate.

15

CLEAR — buy as staged

10

FLAG — buyable, caveat noted & corrected

0

REJECT — tax or pledge defect

24/24

Federally tax-exempt, pledge confirmed

What the pass caught — and corrected before any money moved: **four issuer mis-identifications** (incl. one wrong-county binding that changed the earthquake-zone map), **five stale price marks** re-set to the live tape (one would have overpaid ~2.8 points, two sat unfillable below market), and **two names downgraded to unverified** fire/fiscal status, and **one replacement candidate REJECTED outright** — staged as a Santa Barbara school district, the primary record showed a Los Angeles community-college district (an unverifiable class); it was reverted before any order and replaced with a name whose identity was confirmed at the source first. Every flag on the held book is execution- or label-level; none is a credit, tax, or pledge defect.

METHOD

Seven checks per bond, primary sources only.

- **Tax status** — the MSRB record must state federally tax-exempt; any "TAXABLE" or AMT designation kills the name. *This screen removed 29 bonds from the wider universe during construction, including two University of California issues whose extra yield was the taxable premium in disguise.*
- **Legal pledge** — the issue title and security description must match the claimed pledge (unlimited ad-valorem GO / UC revenue / essential-service revenue); certificates of participation, lease, judgment-obligation, limited-obligation and land-secured paper masquerading under district names are rejected.
- **Call features** — callable status, next call date and price recorded; premium coupons are evaluated to the call, not maturity.
- **Live tape** — freshest trade price/date and two-sided activity pulled at verification time and compared to the working mark; drift >0.5pt or staleness >30 days is flagged and the limit re-set.
- **Yield arithmetic** — the after-tax tax-equivalent yield is recomputed from raw coupon, price and maturity, including the de-minimis rule (market-discount accretion below the $100 - 0.25 \times \text{years}$ threshold taxed as ordinary income, no gross-up). Tolerance: 0.05pp.
- **Issuer identity** — the CUSIP is independently resolved to its issuer and adjudicated against the working list; mismatches are corrected in every downstream artifact (holdings table, hazard maps, credit records).
- **Fiscal-stress roster** — K-12 districts checked by name against the state's AB 1200 Negative/Qualified certification lists (both FY24-25 interims). Community-college districts and utility credits are outside that regime and recorded as **unverified — never treated as clean**.

Discipline notes: each agent verified six bonds it had no hand in selecting; findings override the list (the record reflects what the primary source says, not what the screen believed); and absence of evidence is recorded as unverified, not as a pass.

RESULTS AT A GLANCE

All 24 names: verdict, tax, pledge, tape, math.

Δ vs mark = live tape minus the working mark at verification (points). TEY a-t = after-tax tax-equivalent yield recomputed independently; Δpp = divergence from the staged list. AB1200 ✓ = absent from the state's Negative/Qualified rosters; n/a = outside the K-12 certification regime (recorded as unverified, not clean).
